

In-market audiences

Reach the customers who are looking to make a purchase.

The screenshot shows the 'In-market audiences' section in the Microsoft Advertising interface. It features a search bar, a list of 118 in-market audiences, and a table of selected audiences. The table lists three categories: Apparel & Accessories, Autos & Vehicles, and Sports & Fitness, each with a list size of 1.78M. A 'Remove all' link is visible at the top right of the table. Below the table, there is a checkbox for 'Show ineligible in-market segments' which is currently checked.

Audience name	List size
Apparel & Accessories	1.78M
Autos & Vehicles	1.78M
Sports & Fitness	1.78M

Leverage curated lists of users that are estimated to be 'in the market' for a particular purchase category. When these lists are associated to ad groups or campaigns, you can target and modify bids for these audiences just like you would with remarketing lists.

Increase conversions

Reach curated audiences who are more likely to convert in your category.

Improve bids and targeting

Set up your ad group or campaign to either be exclusive to an audience on a curated list or available to everyone but with a bid adjustment for your targeted audience, similar to Remarketing lists.

Simple to set up

In-market audiences are simple to set up and don't require Universal Event Tracking (UET) tags. From within the Audiences tab in Microsoft Advertising online, just pick the in-market list you want and associate it to any combination of ad groups or campaigns.

Pitch deck and setup guide

 Microsoft Advertising

Overview

What they are and
why they work?

Reach the people who are
'in the market' for a particular
purchase category by leveraging
In-market audiences.

Save time and reach goals

Increase conversions

Reach curated audiences who are more likely to convert in your category. These audiences are comprised of people who are pre-determined to be likely purchasers within a category.

Improve bids and targeting

Set up your ad group to either be exclusive to an audience on a curated list or available to everyone but with a bid adjustment for your targeted audience, similar to Remarketing lists.

Get set up for success

In-market audiences are fast to set up and don't require Universal Event Tracking (UET) tags. Simply pick the IMA targeting list you want to use and add it to any campaign or ad group.

“I want to focus on people who are ready to buy and optimize my spend and messaging for them.”

Our predictive intelligence identifies users who show purchase intent within a particular category—including searches, clicks, and views.

Who should use In-market audiences?

If your business operates in one of the 30+ covered industries, IMA is likely to enhance ad performance.

Leverage Microsoft Advertising's predictive intelligence and target against valuable lists of people who are ready to buy. In-market audience targeting enhances current strategies, and can be used alongside other retargeting features

In-market audiences work well alongside other Microsoft targeting solutions, meaning that you can enhance your strategy rather than replace it.

EXPAND YOUR AUDIENCE

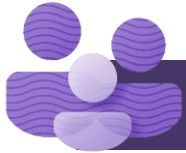

Getting started

How to set up your
first audience?

In-market audiences

Things to know before you get started.

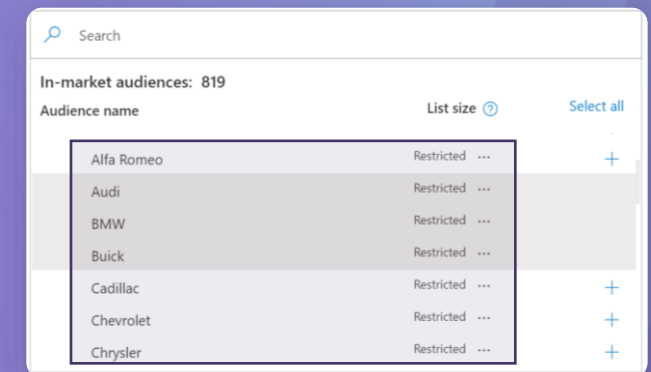

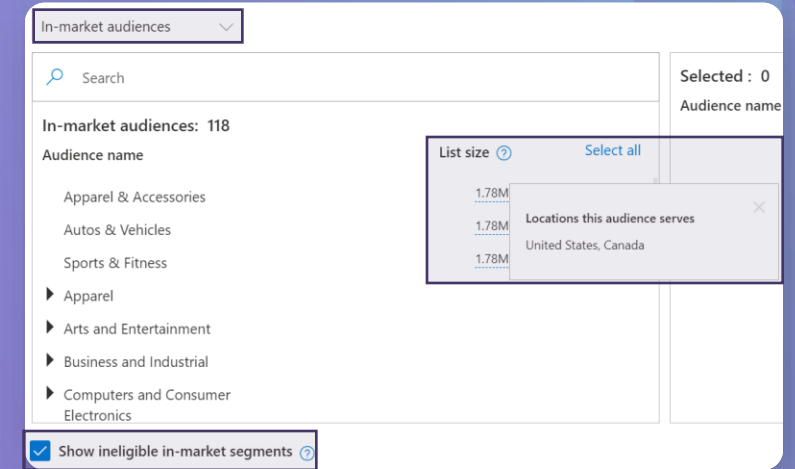

Under audience 'List size' column

- List size represents the total size for the audience list in the Microsoft Search and Audience network within the markets you are targeting for your campaign or ad group.
- For example, if you target US and Canada only then the list size for the segment will be equal to the sum of the size of the segment in US and the size of the segment in Canada.
- 'Ineligible' indicates audience isn't available for the targeted markets. You can choose to hide all ineligible segments by changing the 'Show ineligible in-market segments' setting.
- 'Restricted': the audience size is not able to be viewed. Microsoft Advertising doesn't share how many users are included in auto brand lists to protect the brands' competitive data.

Get set up quickly using Google Import for In-market audiences

- If you have Google Ads campaigns using In-market audiences, you can easily pull your associations, including status and bid boost, over to Microsoft Advertising.

In-market audiences: Market availability

Market availability

Generally available globally

Segment performance by market:

Segments are customized per market; therefore, segment performance may vary from market to market.

The same segment will have a different list size for each market and network it's available to.

US customers running combined campaigns for US, CA, UK, AU, FR or DE may see an increase in targeted in-market impressions and change in performance. Monitor performance and make any adjustments such as adjusting bids or adjusting associations.

Reporting by In-market audiences by market:

To report on Audience performance by location, run separate campaigns for each market.

The screenshot displays the 'In-market audiences' interface. At the top, there's a dropdown menu set to 'In-market audiences'. Below it is a search bar. The main section shows 'In-market audiences: 118'. A table lists audience segments: 'Apparel & Accessories', 'Autos & Vehicles', and 'Sports & Fitness', each with a list size of 1.78M. Below these are expandable categories: 'Apparel', 'Arts and Entertainment', 'Business and Industrial', and 'Computers and Consumer Electronics'. To the right of the table, there's a 'List size' link with a question mark and a 'Select all' button. On the far right, a sidebar shows 'Selected : 0' and 'Audience name'. A tooltip is visible over the 'List size' column, titled 'Locations this audience serves', indicating 'United States, Canada'. At the bottom, there's a checkbox labeled 'Show ineligible in-market segments' with a question mark.

Audience name	List size
Apparel & Accessories	1.78M
Autos & Vehicles	1.78M
Sports & Fitness	1.78M

Locations this audience serves
United States, Canada

In-market audiences: Set up new audiences

- 01 In the Audiences tab, select **Create association** and then **choose In-market audiences**.
- 02 Select the appropriate In-market audience for your business to associate with your ad group. Ensure the audience you select is available for your market.
- 03 Select **targeting options**:

BID ONLY

or

TARGET AND BID
- 04 Select a bid adjustment for your In-market audience associations. (At least 15% is recommended.)
- 05 Click **Save** to finish.

Notes: Screenshot is a mock-up and subject to change as new markets are added. In-market audiences only target on Bing and Yahoo, not Microsoft Advertising search partners.

Create association

Select the ad group or campaign you want to associate with one or more audiences. If you want to associate with multiple ad groups or campaigns at one time, on the Campaigns page, click the Ad groups or Campaigns tab, and then click Edit > Associate with audiences. [Learn more](#)

Campaign Campaign Search campaign 622021

Campaign targeting

Select the audience categories that you want to target for the campaigns, and then select the targeting settings. [Learn more](#)

In-market audiences: Set up bulk associations

Create associations for multiple ad groups in bulk through **Associate with audiences** or bulk account management (BAM).

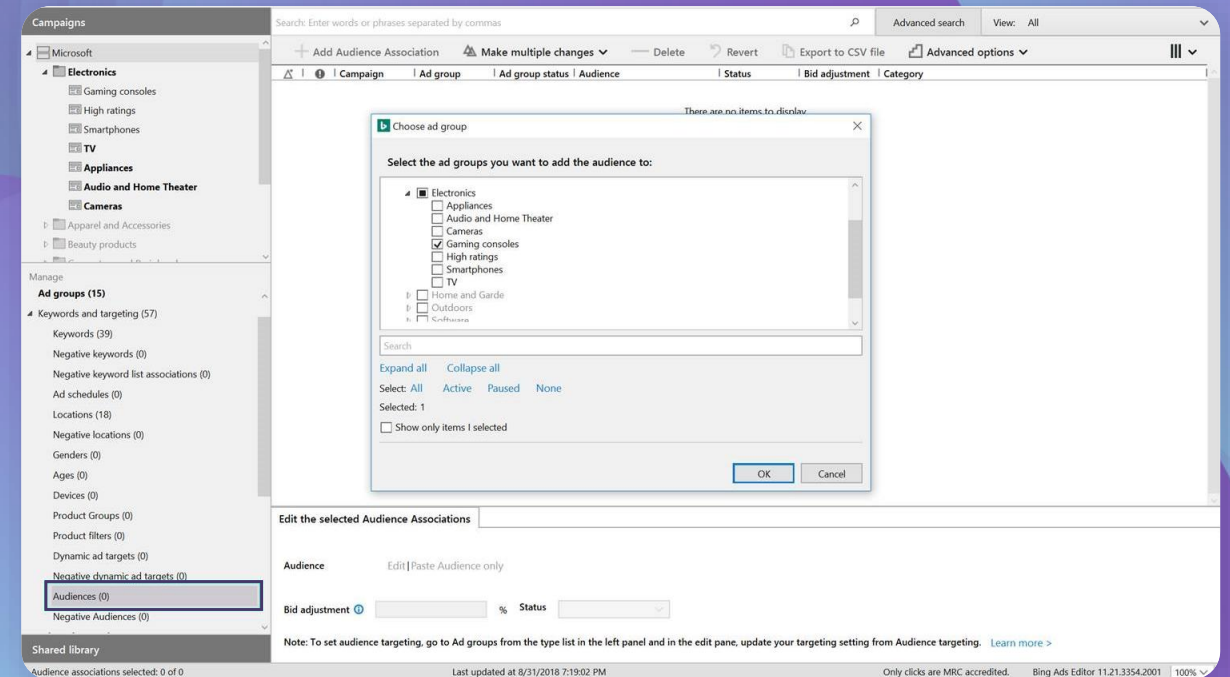

The screenshot shows the Google Ads 'Ad groups' page. The left sidebar contains navigation links: Overview, Recommendations, Campaigns, Ad groups (selected), Ads & extensions, Landing pages, Keywords, Dynamic ad targets, Product groups, Audiences, Demographics, Settings, Locations, Ad schedule, Devices, Change history, Competition, and Experiments. The main content area has tabs for 'Ad groups' and 'Auction insights'. Below the tabs is a table of ad groups. A context menu is open over the 'Associate with audiences' option, which is highlighted. The table columns are: Campaign, Ad group type, Delivery, Bid strategy type, Bid, Labels, Qual. score, and Medium. The table contains several rows of ad groups, including 'Campaign Type Default B', 'Search campaign 62021', 'Campaign Type Shopping A', 'Campaign Type Default A', 'Campaign Type Shopping B', 'test123', 'test audience campaign', 'test campaign3432er', and 'Campaign Type Audience A'.

Campaign	Ad group type	Delivery	Bid strategy type	Bid	Labels	Qual. score	Medium

01 Select the ad groups you want to add the audience to.

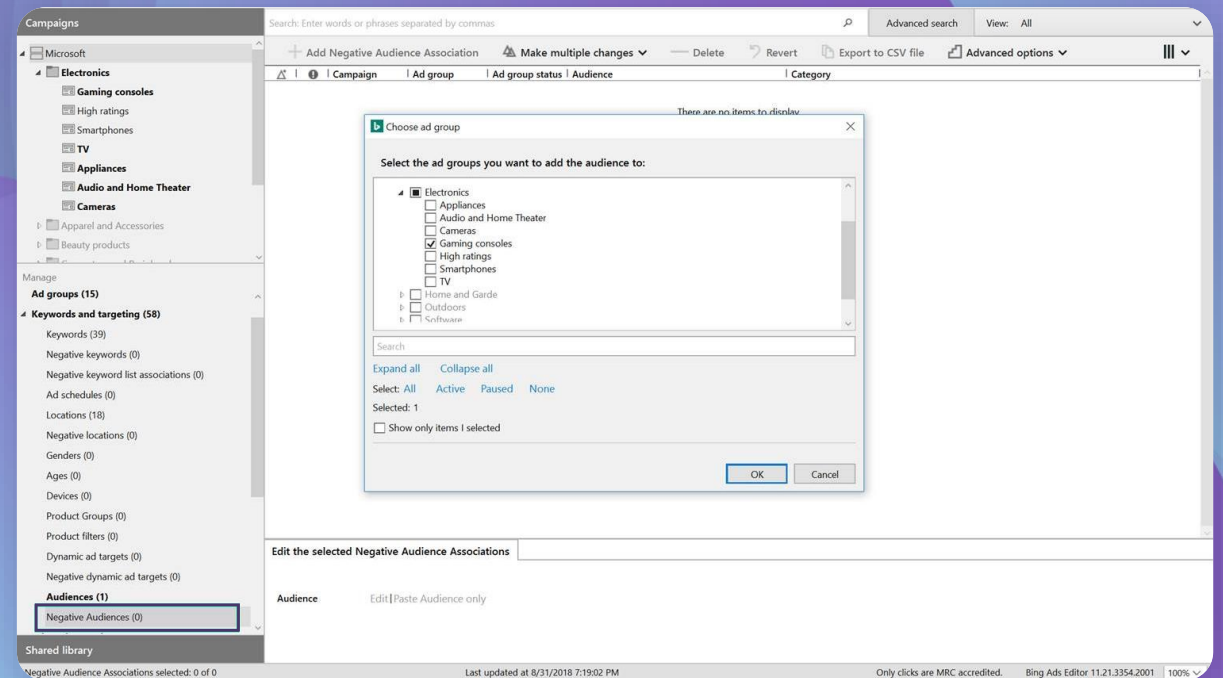

In-market audiences: Set up bulk associations with Editor (2/3)

02 Select the audiences you want to associate with your ad group.

In-market audiences: Set up bulk associations with Editor (3/3)

03 Manage negative In-market audiences associations too.

Best practices

How to see campaign success quickly?

Best practices: Getting started

Choose the In-market audiences category that best aligns to your business goals.

Associate 'In-market audiences' to existing top-performing ad groups with 'bid only' targeting.

Don't duplicate your campaigns.

1. **Start with a 20%+ bid-boost.**
Recommended based on analysis of In-market audiences performance across the Microsoft Advertising Network.*
Or, if you know you'll need to take a more cautious approach to prove it out first:
2. **Start with a 0% bid modifier**
if you're uncertain for the first two weeks.
Then increase to 20% or more.

It's important to start with the right set of customers, to help you focus your budget on people who matter to you.

This approach will help you:

- **Compare performance**
Compare the same ads running with In-market audiences and no audiences associated. (Note, the report should consider the date range when the association was added, as sometimes new campaigns or ad groups are added without adding the In-market audience association.)
 - **Manage your campaigns more easily**
Duplicating your campaigns so you can isolate audience targeting performance takes more time to manage—the same result can be achieved more efficiently without duplicating. Consider duplicating your highest volume campaigns after testing if your return on time spent is justified.
1. In general, we recommend a 20%+ bid-boost for In-market audiences as a good starting point.* Monitor for two weeks (or enough time that your In-market audiences have collected enough data) and based on the lift you see in your click-through rate (CTR) and conversation rate (CVR), you can bid up more from here.
 2. Start with a 0% bid modifier: also known as 'observe your audience for free.'
Anyone new to In-market audiences can do this quickly to get a baseline for performance between the In-market audience and non-audience traffic. It's a missed opportunity if you don't opt to collect performance data with no risk. If you're **confident of campaign performance immediately, bid up by 20%+.** After two weeks (or whenever your In-market audiences have collected enough data), make sure you **bid up (or down) to optimize accordingly.** If you've tested and haven't seen positive performance, consider the In-market audiences you've selected to ensure you're using the right ones for your business.

Best practices: Using targeting options

We recommend 'bid only' targeting.

Bid only targeting is quick and easy to bid up (or down)—it can help you show (or not show) your existing ads to the In-market audience(s) you choose.

'Target and bid' targeting requires a significant time investment in customizing your keywords, ads and website landing pages, which many people don't have time to do with initial setup before evaluating performance. We recommend starting with 'bid only' targeting even if you plan to move to 'Target and bid' eventually.

Use 'target and bid' targeting to customize your keywords, ad copy and landing pages.

[Only use 'target and bid' if you need separate ad copy for certain users, since volume will be very limited compared to using 'bid only' targeting.]

By design, 'target and bid' was created for advertisers to tailor keywords, ad messaging and landing pages for a specific customer— if you're not customizing these elements, there may not be a purpose for you to use 'target and bid.' We recommend starting with 'bid only' targeting even if you plan to move to 'target and bid' eventually.

Before using 'target and bid,' consider:

- **The return on your time spent, since your conversion volume may shrink with this granular targeting.** Do you have time to tailor keywords, messaging and landing pages across campaigns and report out effectively?
- **Volume will be lower with this type and level of targeting.**
The user must be in the In-market audiences list AND searching for one of the keywords in your campaign.
- **Setting a threshold for conversions per campaign**—if your campaign hits that number of conversions, it may be a good use of time to use 'target and bid.'
- Which of your **products or campaigns makes the most sense for 'target and bid?'** Perhaps **high-volume evergreen products or seasonal specials**, for example, where you wouldn't need to continuously be modifying your keywords, ad copy and landing pages.

Make sure you've only selected one targeting setting ('bid only' or 'target and bid') per ad group across all audience targeting features

You cannot use a 'target and bid' setting for some audience lists and a 'bid only' setting for other audience lists in the same ad group – i.e., 'bid only' for In-market audiences and 'target and bid' for Remarketing.

You can only select one targeting setting per ad group that will apply to all your audience lists in that ad group (either 'target and bid' or 'bid only'). Whichever setting you've selected most recently ('target and bid' or 'bid only') overrides any previous settings—the best practice is to double check you are clear on which targeting setting you're using.

Best practices: Modifying bids

Consider bid-boosting by 15% or more for campaigns showing a higher conversion rate.

If you see your conversion rate is greater with your In-market audiences associated, bid up. If your conversion rate is not satisfactory, bid down—the rest of your campaign will be more efficient.

Start bid-boosting up with your highest volume campaigns.

Time is limited—bid-boost on your highest volume campaigns by spend and conversions first to realize the greatest impact.

Consider auto-bidding where you have higher conversions.

If you have a negative bid modifier on an audience list, reinvest efficiency gains into the non-audience keyword bid.

Best practices: Capturing more volume

Expand your match types.
Test **broad match** with audience targeting.

View the [broad match with audience targeting best practices](#), which include performance metrics that show running your audience targeting campaigns with broad match can help you achieve comparable or better results than exact match with no audience targeting, with 'Target and bid.'

Test different campaign types:
Shopping campaigns, Microsoft Audience ads (native), and Dynamic search ads.

Audience targeting works across all campaign types, including Shopping campaigns, Audience ads and Dynamic search ads.

Capture mobile traffic.

Capture more volume by extending campaigns across device types or running mobile-only campaigns, which can account for 25% of Microsoft Advertising Network search volume.

Bid on broader search terms.

Consider broader search terms that tend to be highly competitive and expensive keywords, while keeping your budget on track by using audience targeting.

1. Microsoft internal data, U.S. Microsoft Search Network, August 2017.

Best practices: Using targeting solutions together

Use Remarketing, Custom audiences, and In-market audiences together.

We recommend using all the Microsoft Advertising audience targeting solutions in combination to best reach your customers. Together, they can help you reach both potential and existing customers by combining your own customer data and Microsoft Advertising data. Microsoft Advertising will only serve the ad to the user on the audience list with the highest bid modifier, meaning you won't be charged multiple times.

Microsoft Advertising brings the list:

With In-market audiences, Microsoft Advertising uses predictive intelligence to build and bring the lists right into Microsoft Advertising for you to use—lists of people who are ready to buy in a particular category.

You bring the list:

With Remarketing, you can create lists of people who visit your website and take a particular action you define. And with Custom Audiences, you can build lists of website behavior and unique customer attributes, based on your CRM system.

Best practices: Tracking performance

Regularly monitor In-market audience campaigns through Microsoft Advertising online via the **ad group report** and **audiences report**.

We recommend the report view be set at the ad group level or at least campaign level due to the traffic size of campaigns with In-market audiences associated.

Audience reporting

How to leverage audience segmentation analysis?

Audience reporting through audience segmentation (1/4)

With Audience segmentation, it's easy to see how your ad groups perform with audience targeting and without audience targeting—all without leaving the Campaigns page.

Ad group	Campaign	Ad group type	Bid strategy type
Overall total - 7,335 ad groups			
Ad group 1	Campaign 1	Standard	
Ad group 2	Campaign 2	Standard	
Ad group 3	Campaign 3	Standard	

This reporting is available in six locations in Microsoft Advertising online: the Accounts summary page and the Campaigns, Ad groups, Ads, Keywords and Ad extensions tabs on the Campaigns page. It's also easy to export.

Step 01

Select and apply audience segment.

Step 02

Select **Audience name** to display each of your audience lists in its own row or select **Audience category** to group by audience targeting feature type (Remarketing, In-market audiences, Custom audiences).*

TIP

*Start by segmenting by **Audience category** to identify which feature's audience lists are performing best.

For audience lists performing well, consider increasing your bid boosts after collecting enough data.

We recommend a 20% bid boost for In-market Audiences and a 15% bid boost for Remarketing.

Audience reporting through audience segmentation (2/4)

Segment by Audience category

Step 03

View all the audience categories you have associated with your ad group—such as Remarketing, In-market audiences and Custom audiences—and their performance with audience targeting associated and without audience targeting.
