Audience ads

 Microsoft Advertising

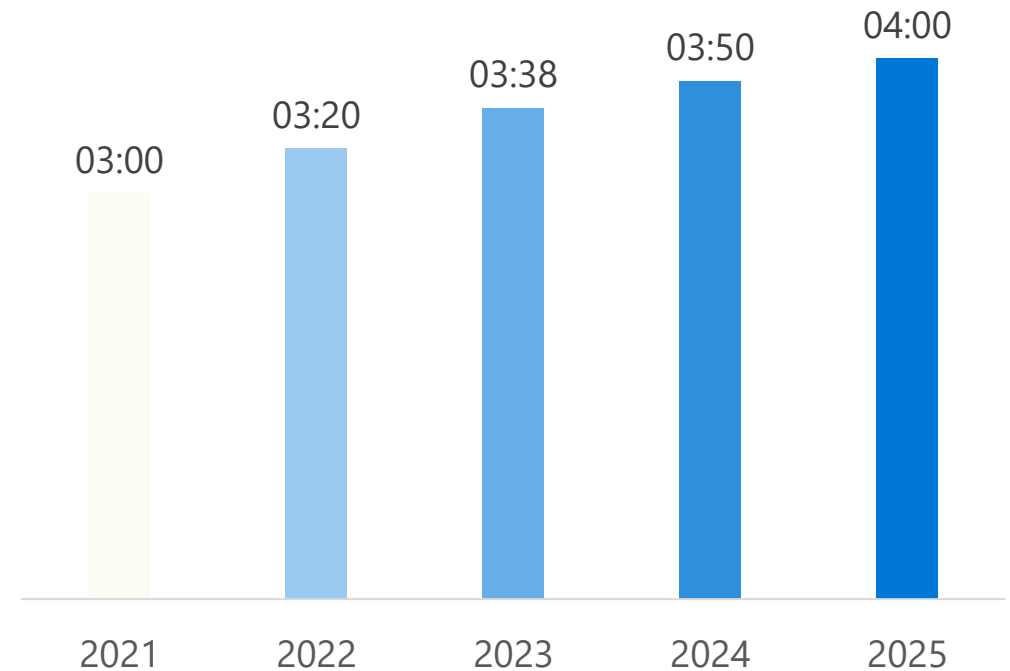

Video consumption is growing rapidly

Video is quickly becoming the preferred medium to consume content.

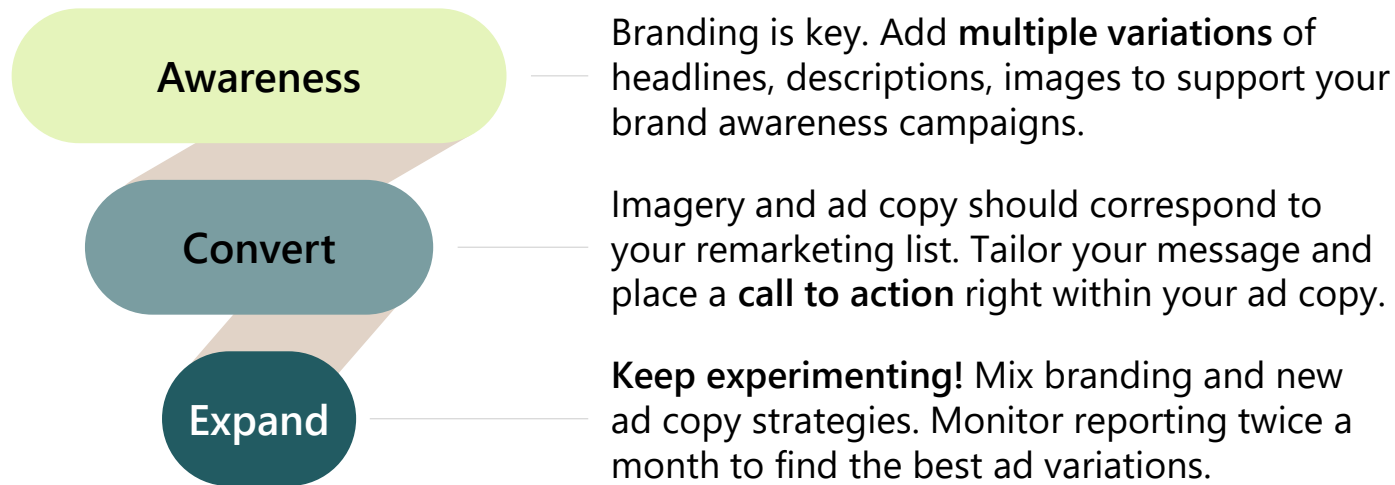

Time spent watching digital video is expected to hit **almost three and a half hours per day** by 2024.

Average time spent per day with digital video
(US, 2021-2025)

Creative strategies and best practices

Complement your funnel strategy

Timing is everything

Use your promotions!
Keep promotional ads separate from evergreen ads.

Seasonality is important.
Don't advertise winter jackets in the warm summer months.

New ad content needs time to build momentum.
Keep your existing ads live until the new images and copy ramp.

Optimizing for performance

Is that user fatigue setting in? Need MORE creative?

Creative best practices for video ads

1

Be creative and experiment

Test different lengths, intro text copy, headlines and landing pages to see what resonates best with your audience. Focus on storytelling and great visuals.

2

Capture your audience attention early

Although your ads can run longer, the first 10 seconds are critical to land your message. Include pertinent and engaging content up front.

3

Feature your product or brand message

Showcase your brand identity early in the video and make sure people remember it.

4

Make your video mobile AND desktop friendly

Most people hold their phone vertically and a square aspect ratio will help you cover other screen formats.

5

Design for sound off

People choose to watch videos with sound off in many situations, such as in public places. Use text and graphics and use captions whenever possible.

6

Adapt your message to the customer journey

Map your video to campaign objectives.

- **Awareness:** focus on content that inspires and tells a story about your brand.
- **Consideration:** provide messaging around how your brand is positioned in the marketplace.
- **Conversion:** include more information about the product or service and drive to sign up/purchase pages.

Video specification requirements

With Video and Connected TV ads, advertisers can reach their audience across a wide range of online video and Connected TV inventory. To access more premium online video and CTV inventory, advertisers need to upload higher quality assets.

Video assets are categorized in three ways:

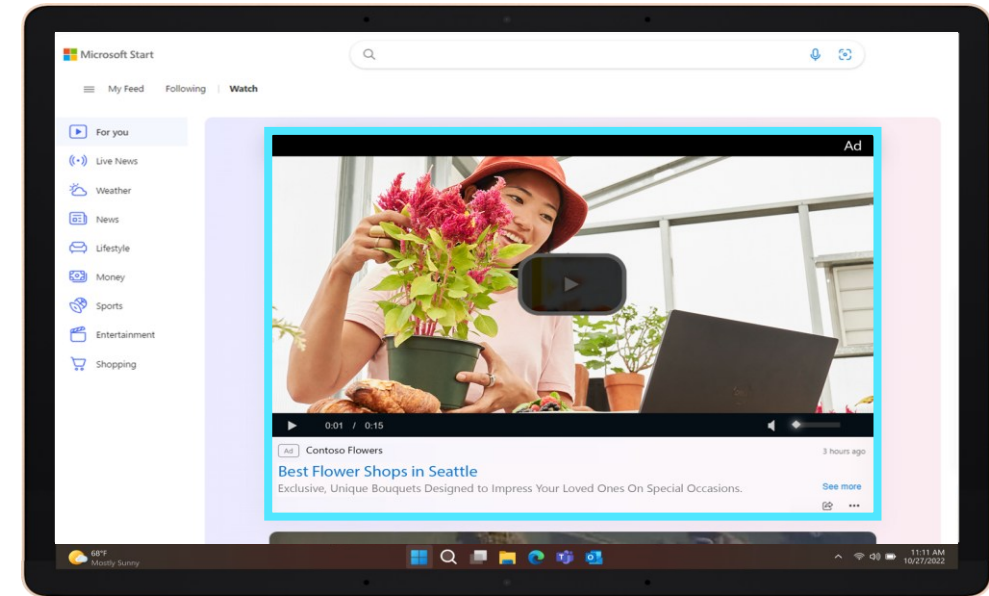

- Fair Quality
- Good Quality
- Excellent Quality

Once you upload your videos to Microsoft Advertising, the system will determine which quality standards your video meets using a three-star rating, with three stars being the highest.

Use the guidelines on the next slide to understand what the requirements are for each of the different video qualities. If you wish to advertise on our most premium inventory, ensure that your video meets the excellent quality requirements.

Tap into intent signals on video ads to captivate your ideal customers
