Website exclusion list (updates)	Open beta	All markets	English	Microsoft Advertising UI Desktop	Audience ads (Support for other campaign types expected to launch by July 2025)
Targeted website lists	Open beta	All markets	English	Microsoft Advertising UI Desktop	Audience ads
Mobile app reporting	Generally available	All markets	English	Microsoft Advertising UI Desktop	Search, Audience, Performance Max, Shopping, App install, Lodging

Website control lists

Website exclusion lists

Prevent your ads from appearing on specific websites by adding them to your exclusion list. This helps you avoid placements that may not align with your brand or campaign goals, ensuring better control over where your ads are shown

Targeted website lists

Specify a curated list of partner websites where you want your ads to appear. This allows you to focus your advertising efforts on high-performing or brand-safe sites that are most relevant to your target audience. Your ads will still always serve on Microsoft sites

Managing mobile app traffic

Manage where your ads appear within mobile apps by either targeting or excluding specific apps. Use this feature to focus your campaigns on high-performing app environments or to avoid placements that may not align with your brand or performance goals. This improved control helps you optimize ad delivery and improve overall campaign effectiveness.

BENEFITS

Enhanced brand safety

Ensure your ads only appear in environments that align with your brand values.

Improved performance

Focus your ad spend on high-performing, relevant websites and placements to drive increased performance

Enhanced targeting

Fine-tune your campaign reach by specifying exactly where your ads should and shouldn't appear to effectively reach your target audience

Website exclusion lists

Feature guide

Website exclusion lists

It's easier than ever to manage your website exclusions in bulk

Now you can manage your campaign level exclusions in the same place that you manage across accounts

BENEFITS

Streamlined management

Manage your website exclusions for your accounts and campaigns in one place

Flexibility across campaigns

Apply and manage exclusions for multiple campaigns at one time

Increased website limits

add up to 10,000 websites per campaign exclusion list and up to 100 campaign lists per account

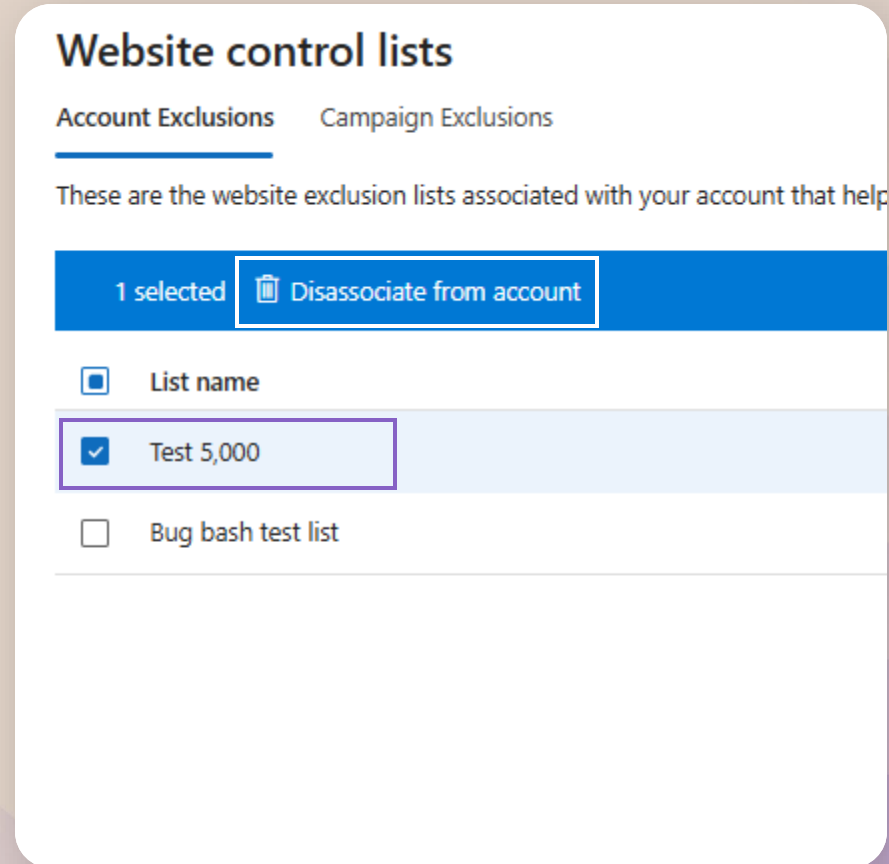

Managing website exclusion lists

Account level – New Updates

01

Review manager account level lists

- When you first navigate to website control lists at the account level, you will see all the manager account level lists that are applied to this account.
- To remove a list from this account, select the check box and click **disassociate from account**
- Note: You cannot create new account level lists in this section, they must be created at the manager account level

02

New: Managing campaign level lists

- Creating lists at the account level is most suitable for ensuring brand safety and suitability across an entire account
- At the account level, you can create up to 100 website control lists to apply to the campaigns in your account
- Click on **create** to create a new campaign level exclusion list
- Add the websites you wish to exclude and select **OK**

01

Campaign level management

- Scroll down and click on **advanced settings**
- Expand website **control lists**
- At this view, you can see which account or manager account level lists are applied to your campaigns and can adjust or search for additional ones to apply
- You can also manually add individual websites to this specific campaign, but we recommend that you use central lists to streamline management

Notes on ad group level website exclusions

Manager account, account and campaign level website exclusion lists cannot be applied to specific ad groups.

We recommend that you manage website control lists at the campaign level. However, you have the option to add specific websites at the ad group level. Remember that adding websites at the ad group level will override any individual sites that are added at the campaign level.

03

Associating lists

- Select the checkbox of the list you wish to associate with your accounts. You can also select multiple lists at one time
- Click on **associate account to list**
- Choose the accounts to which you wish to associate these lists. To apply it to all accounts within your manager account, you can select all accounts by selecting the manager account level check box

Targeted website lists

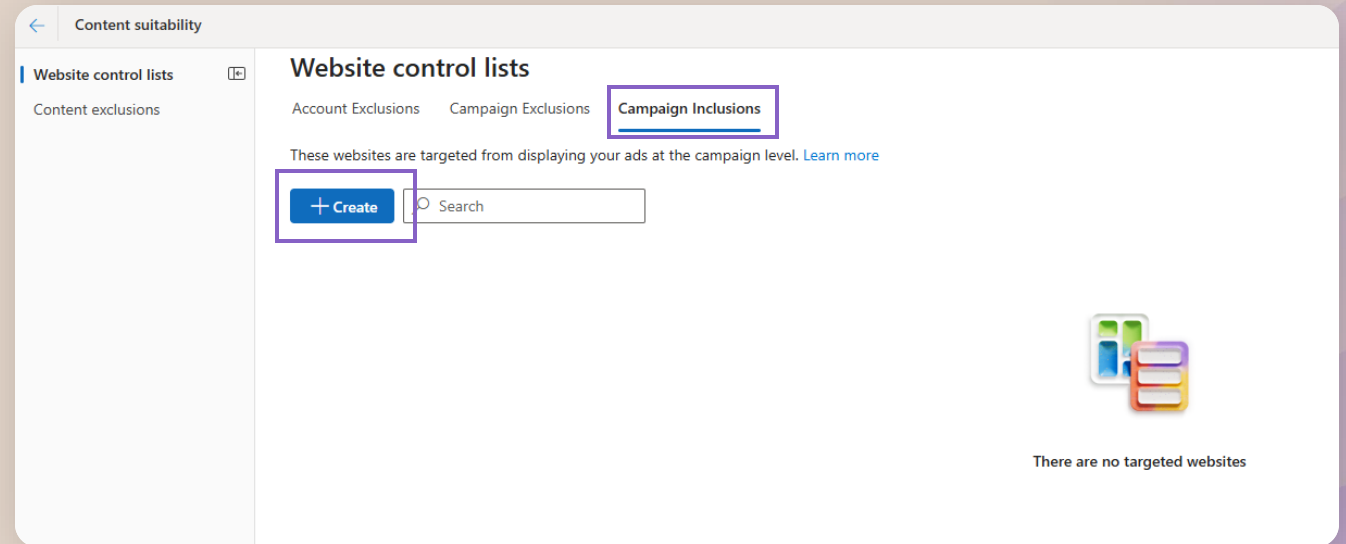

Feature guide

01

Create a targeted website list

- Targeted website lists are suited to ensuring brand safety and suitability across specific campaigns
- Targeted website lists are created at the account level only and cannot be created from the manager account level. You can create 100 lists per account
- Navigate to **content suitability**, followed by **website control lists**
- Select **campaign inclusions**
- Click **create** to create a new list of targeted websites

02

Create a targeted website list

- Give your targeted website list a **name** that makes it easily identifiable
- Add the **list of websites** that you wish to add to your targeted website list. You can add up to 10,000 domains per list (note that the limit per upload is 5,000 domains)
- Click **add** to save your list
- Watch out for any errors that need to be fixed with domains before proceeding

Campaign level management

- You can manage your targeted website lists for individual campaigns by navigating to **campaign settings**
- Expand **advanced settings**
- Scroll to **website control lists** and select **targeted websites**
- Search for your targeted website list and apply it to your campaign by **selecting the check box**

Managing mobile app traffic

Feature guide

01

Managing mobile app traffic

- When reviewing where your ads have served in the website URL publisher report, you will now see reporting for individual apps where your ads have delivered
- In addition to the already existing app store URL, you will see new columns in reports to provide more information including: mobile web URL, mobile bundle and mobile app name
- When adding mobile app exclusions or targeting them in your campaigns, you should use the **mobile bundle** information to add these to your campaigns.
- Mobile bundle IDs can be used for targeted websites or exclusions at the account, campaign or ad group level

outlook.live.com	Microsoft Outlook - email and calendar	com.microsoft.office.outlook	https://play.google.com/store/apps/details?id=com.microsoft.office.outlook

02

Don't miss out on valuable mobile app traffic

- As reporting for individual mobile apps is a new feature, you may have previously excluded all mobile app traffic from your campaigns using the full app store URLs (i.e. play.google.com)
- We recommend that you remove these URLs from your exclusion lists so that you can now monitor performance for individual apps and make exclusions as necessary, rather than excluding all mobile store traffic

Website exclusion lists

Frequently asked questions

Frequently asked questions

Website exclusions

01

I have existing website exclusions in place at the campaign and ad group level; will those continue to be honored?

Yes, with these updates, your existing website exclusions will be continued to be honored. However, we recommend that you revisit your website exclusion strategy and move them to a higher level (Manager account or account) to make it easier for you to manage your exclusions across all your campaigns.

02

Why can I not apply a list at the ad group level like I do at the campaign level?

Our data shows that the majority of advertisers manage their website exclusions at the campaign level. You can continue to add individual sites at the ad group level if you wish, although we recommend using account and campaign level lists to help you better manage your exclusions. Remember that any websites added at the ad group level will override any websites added at the campaign level.

03

I cannot find the manager account level, where is it?

You can navigate to the manager account level of your account by clicking the top level of your account next to the Microsoft Advertising logo in the UI. Refer to slide 6 for more information. Website exclusion lists can also be created at the account level and applied to campaigns.

Frequently asked questions

Website exclusions

-
- | | | |
|----|---|---|
| 04 | Are there any limits to the number of lists and sites I can have? | Yes, but these limits have been increased with these new updates. You can create up to 3 account exclusion lists per manager account, but 100 campaign exclusion lists per account and can have up to 10,000 websites per list. |
| 05 | Do these new website control lists work on all campaign types? | For now, these website control list updates only apply to Audience ads. We will be releasing support for other campaign types in the near future. |
| 06 | Can I manage my website exclusions in bulk using Microsoft Advertising Editor or the API? | You can currently manage your exclusions via the Microsoft Advertising API. Support for management via Microsoft Advertising Editor is coming soon. |
-

Targeted website lists

Frequently asked questions

Frequently asked questions

Targeted website lists

01

Will my ads only serve on the sites that I have specific in my targeted website list?

For partner sites (i.e. non-Microsoft websites), your ads will only serve on the sites that you specify in your targeted website lists. Your ads will also serve on all Microsoft sites as these cannot be excluded from Audience ads.

02

What happens if I have the same website in an exclusion list and in a targeted list?

Targeted websites will always take priority over exclusions, meaning that if you have the same website in an exclusion list as your targeted list for the same campaign, the exclusion will not be honored.

03

I do not want my ads to serve on Microsoft sites, how can I exclude them?

Microsoft sites cannot be excluded from Audience ads.

04

How many targeted website lists can I create and how many domains can I have in each list?

You can create up to 100 targeted website lists per account. In each list, you can have 10,000 domains, but please note that the number domains per upload is limited to 5,000.

Managing mobile app traffic

Frequently asked questions

Frequently asked questions

Mobile app traffic

01

Now that I can exclude individual mobile apps, can I still exclude all app store traffic?

Yes. Although you will now be able to exclude individual mobile apps, you can continue to exclude all app traffic using the relevant app store URLs. However, we recommend that you remove these exclusions so that you can see how individual apps perform for your campaigns and make exclusions based on those.

02

What level can mobile apps be excluded at?

Mobile apps can be excluded at the account, campaign or ad group level.

03

What campaign types support mobile app exclusions?

Mobile app exclusions can be added for Search ads, Audience ads, Performance Max, Shopping ads, App install ads and Lodging ads

Frequently asked questions

Mobile app traffic

04

Can mobile apps only be excluded or can I also add them to targeted website lists?

Mobile apps can be added to both website exclusion lists and to targeted website lists

05

Can I exclude traffic coming from Microsoft mobile apps, such as Outlook?

No, it is not possible to exclude mobile app traffic from Microsoft apps. You can use mobile bundle IDs to exclude traffic that is coming from non-Microsoft apps.

Thank you
