CODE OF CONDUCT

Microsoft's mission is to empower every person and every organization on the planet to achieve more. This includes all Microsoft events and gatherings, including on digital platforms and in person, where we seek to create a respectful, friendly, enjoyable, and inclusive experience for all participants.

We expect all event participants to uphold the principles of this Code of Conduct. The Code of Conduct applies to all aspects of the main event and any related activities, whether digital or in person. Microsoft does not tolerate the following in any aspect of the event program, including business and social activities:

- Behavior that is disruptive, disrespectful, or degrading to others, including any messages, images, or interactions by anyone, in any form, regardless of location.
- Harassment or discrimination based on age, ancestry, color, gender identity or expression, national origin, physical or mental disability, religion, sexual orientation, or any other characteristic protected by applicable local laws, regulations, and ordinances.

- We encourage everyone to assist in creating a welcoming and safe environment. Please report any concerns, harassing behavior, or suspicious or disruptive activity to venue staff, the event host or owner, or the nearest event staff.
- We also encourage everyone to contact Microsoft's Business Conduct Hotline at any time if you feel anything or anyone is not following this Code of Conduct or is inconsistent with Microsoft's culture. The Hotline is available regardless of whether you are a Microsoft employee and can be reached at or +1 (877) 320-MSFT, or call collect outside the United States at +1 (720)-904-6844. Microsoft employees can also report any concerns to their Microsoft Manager.

Microsoft reserves the right to refuse admittance to or remove any person from a Microsoft event at any time at its sole discretion.

WHAT CHANGED

This is the new shop window

People still search, click and browse. But more of the deciding now happens inside an AI answer, before anyone reaches your site

best womans marathon shoes to prevent stress injuries

If your goal is **reducing stress fracture and overuse injury risk while training for a marathon**, I'd prioritize **comfort, cushioning, and fit** over the fastest race-day shoe. Research has found that runners who perceived their shoes as more cushioned and comfortable had a lower injury risk. nih +1

Best Women's Marathon Training Shoes for Injury Prevention

1. ASICS Gel-Nimbus 27/28

Best overall for impact protection

- Plush cushioning with excellent shock absorption
- Great for high-mileage marathon training
- Especially good if you've had shin splints, stress reactions, or sore joints
- Softer and more protective than the Novablast marathonhandb... +1

2. Brooks Glycerin Max (or Glycerin 22)

Best for long-run comfort

- Extremely cushioned
- Stable platform without feeling like a stability shoe
- Great for runners prone to fatigue-related injuries runnerscove +1

3. Hoka Bondi 9

Best maximum-cushion option

- One of the most protective shoes available
- Popular among runners recovering from stress injuries
- Not fast, but excellent for absorbing impact footwind

THE PROBLEM

Most teams still measure clicks and rankings — after the decision is made

Discovery moved upstream

Influence now happens inside AI-generated answers, before a customer ever visits your site.

Traditional analytics can't see it

Web analytics measures visits after arrival. It can't explain how AI retrieves and cites content upstream.

Visibility without action

Knowing a citation happened isn't enough. Teams need to know which gaps to close first.

The post-click blind spot

Problems blamed on targeting, bidding, or creative are often landing-page problems.

AUDIENCE POLL

Can you see today whether AI systems are citing your content?

Thumbs up for yes, thumbs down for no.

A free analytics platform for the AI era of the internet

Clarity shows how AI discovers and represents your business — then shows what customers do after they arrive. **One platform. No cost.**

AI VISIBILITY

How AI finds and cites your brand

- Grounding queries — the questions AI used
- Citations — which pages AI referenced
- Share of authority — your citation share vs. others

BEHAVIORAL ANALYTICS

What customers do next

- Session recordings — watch real journeys
- Heatmaps — clicks, scrolls, and focus
- Friction signals — rage clicks and dead clicks

01

Know where AI finds your
brand and where it does not

How one shopper prompt becomes many queries

Nobody typed these. The assistant ran them on the shopper's behalf.

What the shopper types

"What are the best running shoes for flat feet if I run on pavement?"

Grounding queries the AI runs

- Best running shoes for flat feet
- Stability vs. neutral running shoes
- Cushioning for running on pavement
- Running shoe reviews and ratings
- Best shoe brands for overpronation

What the shopper sees

One clean answer

The brands cited are the ones whose pages answered the hidden searches.

What that looks like in the AI Answers

Each cited page won a different background question — and the gaps are your to-do list.

The answer the shopper sees

For flat feet on pavement, choose stability shoes with firm midsoles. [runwell.com](#)

On hard surfaces, a firmer midsole usually beats maximum cushioning. [pacelab.com](#)

Popular picks include the Road GT and the Trailfirm Stride. [roadrunnerreview.com](#)

Cited page

Won on grounding query

runwell.com

Best running shoes for flat feet

pacelab.com

Stability vs. neutral running shoes

roadrunnerreview.com

Running shoe reviews and ratings

A search a competitor won is a page you owe.

Illustrative example. Brand names and URLs shown are fictional.

Real Data, Not Assumptions

Most tools rely on scraped data and estimates. Clarity shows what’s actually being referenced across major AI platforms, based on real citations and the queries behind them.

Microsoft Clarity	Other GEO Tools
✓ Microsoft AI and select partner grounding data	Sampling & estimates
✓ Real query-level data	Inferred from search results and panels
✓ Actual citations in generated responses	Approximated from simulations

02

Win more ground in AI conversations

Use your own topics, prompts, and competitors

1

Add your topics

Default topics describe your category. Your topics describe your business: the questions you want to be the answer to.

2

Add your prompts

Write the way customers actually ask. “what are the best waterproof boots for winter?” beats a keyword.

3

Add your competitors

See who AI cites instead of you. Add the brands you actually compete with so Share of Authority reflects your real market.

Create new topic

03

See what happens after AI
sends you customers

See how they behave once they're there

See how they engage

Heatmaps and session replays filtered by source

Ask questions, skip the filters

"Why did mobile conversion drop last week?" Copilot answers.

Compare behavior

Analyze how engagement varies across traffic sources

They arrived ready to buy. Then they left.

Dead clicks in the checkout flow

Visitors clicked "Upload" in the custom boot fitting tool and nothing happened. Repeat clicks, then exit.

Pricing was unclear

"From \$49" with the real price behind a configurator. Rage clicks on the price, then exit.

The offer sat below the fold

Free shipping never got seen. Most visitors stopped scrolling before 20% depth on every device.

None of these are traffic problems. All three are page problems.

AI, PAID, ORGANIC, SOCIAL, DIRECT

Separate your traffic before you judge it

They behave differently

AI-referred visitors often arrive with the comparison already done, so their journey is shorter and more focused.

So optimize differently

A social visitor needs convincing. An AI visitor usually needs confirming: price, stock, shipping, proof.

Exclusive Sneak Peak

SNEAK PEEK

Your conversational AI analyst

Every brand will have an analyst.

Ask a question in plain language, the way you would ask a colleague. It already knows your site, investigates across your data, shows its work, and turns conversations and behavior into decisions you can trust.

Are visitors from other European countries hesitating to buy because of shipping costs, delivery expectations, or because the product prices may seem unusually low for their market and therefore affect trust or perceived value?

Reading 312,480 sessions

Non-Greek European shoppers do hold back — but mostly before they ever reach the cart

Yes, visitors from other European countries reach your cart at far lower rates than Greek shoppers (2.86% vs 7.11%) — but of your three theories, only shipping cost holds up, and only for the small group who get that far. Delivery expectations and low-price distrust are not supported by the behavior. The dominant reason is upstream: most non-Greek visitors arrive with research intent on your blog/articles and leave before shopping at all.

THE STRENGTH

Your English SEO content is a strong traffic magnet across Europe — Germany, France, Bulgaria, the UK and more — and your prices read as fair value, not “too cheap to trust.”

THE PROBLEM

That content traffic arrives to read, not buy, and there's little guiding readers to products. For the few who reach the cart, a Greece-only delivery option and hidden EU shipping cost add real friction.

What the data shows

Non-Greek Europe is about 10.5% of your traffic. On every engagement measure, this group trails your Greek shoppers — they bounce more, view fewer pages, and reach the cart at roughly 0.4× the Greek rate.

visit vs Greek

The full picture

1

The real reason isn't at the cart — most non-Greek visitors leave before they ever shop

Before shipping, delivery, or price can even enter the picture, the large majority of non-Greek European visitors are already gone. About 54% land directly on an English research/blog article (herbs, bee products) from search — and ~96% of those bounce, with only ~1% ever reaching a product. These are mostly content readers, not shoppers. The cart-reach gap holds even among brand-new first-time visitors (Greek 5.63% vs non-Greek 2.26%).

2

Your English store is only half-translated

Worth flagging because it's fixable: your /en/ English storefront is inconsistently translated. The single most-clicked element by English-store visitors is a cookie button still labelled in Greek ("Αποδοχή"), and core "Add to cart" / "View cart" buttons plus some pop-ups still render in Greek. After accounting for what kind of traffic lands there, the English store still carries a residual ~+8.6 percentage-point higher bounce on product entries.

3

The language selector only has Greek and English - non English foreign visitors have no path to their language

The selector is a binary GR ↔ EN toggle — no French, German, Italian, Bulgarian, or any other

3

The language selector only has Greek and English - non English foreign visitors have no path to their language

The selector is a binary GR ↔ EN toggle — no French, German, Italian, Bulgarian, or any other language option. For your largest non-Greek European audiences (Germany 694, France 250, Bulgaria 242 sessions over Sep–Apr), visitors who find the selector still have nowhere to switch to. In recordings, visitors open and close the dropdown repeatedly — hunting for an option that isn't there — before giving up or selecting English as a fallback.

4

Shipping cost — the one hypothesis that holds up, but only for the few who reach the cart

Of your three theories, shipping is the only one with real behavioral evidence. Among the small group of non-Greek visitors who reach the cart, about 42% (5 of 19 analyzed sessions) showed shipping-related hesitation — versus 0 of 6 Greek baseline sessions. Two things trip them up: a BoxNow locker-delivery block that only works in Greece (its “Select Country” field is greyed out for non-Greek visitors, and one English version is literally labelled “Only for Greece”) which they dead-click on, and a “shipping calculated at checkout” label that hides the actual EU cost until they’ve already left Clarity’s view into Shopify’s checkout. The EU free-shipping threshold is also €100 — unreachable for your €6–21 products, where Greece’s threshold is just €45.

How visible is my site in AI assistant answers, and do the visitors who click through from AI citations convert better than my other traffic?

Reading 312,480 sessions

Your AI visibility is real but brand-heavy — and the visitors it sends convert nearly 2× better

Over the last 30 days, Clarity was cited about 18,500 times across ~2,540 distinct questions in AI-assistant answers — a healthy mid-volume footprint. But it's concentrated on people who already know your name, and the visitors who do click through convert at 9.41% vs 5.25% for everyone else.

Your AI visibility is real but brand-heavy — and the visitors it sends convert nearly 2× better

Over the last 30 days, Clarity was cited about 18,500 times across ~2,540 distinct questions in AI-assistant answers — a healthy mid-volume footprint. But it's concentrated on people who already know your name, and the visitors who do click through convert at 9.41% vs 5.25% for everyone else.

THE STRENGTH

AI-referred visitors click “Get started” at 9.41% — nearly double your 5.25% site-wide baseline — and the gap survives every fairness check (device, new-vs-returning).

THE PROBLEM

~60% of citations come from branded queries (your own name). The category-discovery questions where new buyers shop — “best heatmap tool,” “session replay software” — are your weakest area and slightly shrinking.

Appendix

Reference detail, competitive
context and deeper
background

Metrics that matter, and what to do about them

Share of authority

What it measures

Of all the sources AI leaned on to answer questions about a topic, how much of that came from you. Think of it as share of voice for AI answers.

What you should do

Track the trend over time as you publish. Watch the direction, not the decimal point. Moving from 5% to 9% on a topic you care about is the win.

Answer contribution

What it measures

How much of an individual AI answer your content actually supplied, not just whether you showed up somewhere in it.

What you should do

Find the topics where you appear but barely contribute, then add the specifics AI can quote: numbers, ranges, conditions and clear comparisons.

Citation rate

What it measures

How often your pages are cited across the queries in a topic, split by branded and non branded questions.

What you should do

Watch the non branded number. If you are cited when people ask about your brand but not when they ask about the problem, you are only reaching people who already know you.

THE CROSSOVER ADVANTAGE

See how AI behaves and how humans behave — and where they cross over

Microsoft Advertising uniquely gives you **full search-term transparency** that other ad platforms don't. Paired with Clarity's grounding queries, you see both sides of demand.

HOW AI BEHAVES

Grounding queries

The exact questions AI used to retrieve and cite your content in answers.

HOW HUMANS BEHAVE

Full search terms

The real queries people type — shown in full, only on Microsoft Advertising.

THE CROSSOVER

Where AI demand and human demand meet

Spot the terms winning in AI answers that people also search by hand — so you can align content, bids, and creative to the moments that move buyers.

Auction Insights is your competitive intelligence for advertising

See exactly who else is competing for the terms you bid on — and how often they beat you to the top.

Who's bidding

How many competitors are bidding on the terms you're also bidding on.

Overlap rate

How often a competitor's ad showed in the same auction as yours.

Position above rate

How often they served above you when you both appeared.

Why it matters when a rival keeps serving above you on your highest-intent terms, that's where to raise bids, sharpen creative, or shore up the content AI cites. Pair Auction Insights with Clarity's share of authority to defend the terms that matter on both the paid **and** the AI-answer side.

What Clarity helps you do

Topic Insights

Pick the topics that matter to your business.
See how often AI cites you on them, who it
cites instead, and which gaps to close first.
