Information needed
for ChatGPT Ads campaigns

General:

- Preferred Advertiser Name – This is the consumer-facing brand name that will pop up alongside ChatGPT ads. Please make sure all punctuation, capitalization, and spelling is correct:
- Preferred Advertiser URL:
- Preferred Advertiser Image – Link to an image or a small brand logo (favicon) that will appear next to the brand name and product image. MUST BE A SQUARE log. Recommended spec: 128x128px PNG or SVG, max 10MB:
  Example: https://www.criteo.com/wp-content/themes/criteo2017/img/criteo-logo-orange.svg
- Tags: Is the Client planning to implement the Criteo OneTag, or go live without initially?
- Monthly Campaign Budget:
- Start Date & End Date:

Package 1: BRANDING: Branding-focused clients who want to test OpenAI inventory while driving awareness and visits on overall brand.com instead of a product page.

- Please fill out Brand Onboarding Template
- See Custom Product Feed OAI Spec Guide for Details

Package 2: CUSTOMER-DEFINED OFFLINE PRODUCT SET: Brands who are strict about product feed limitations like price range, brands or categories, or who do not have a standard product feed with Criteo.

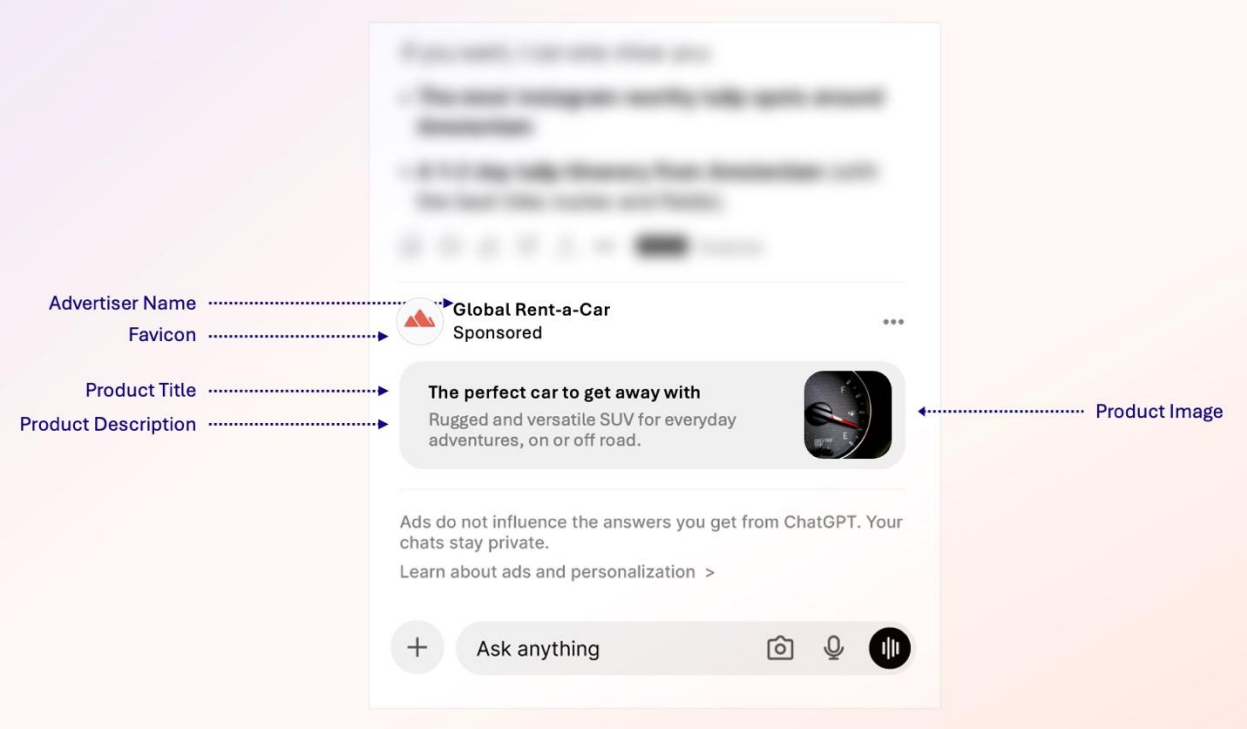

- Please fill out Product Onboarding Template
- See Custom Product Feed OAI Spec Guide for Details

Package 3: OPENAI-DEDICATED AUTOMATED CAMPAIGN: Brands who would like to leverage an automated Product Feed with Criteo, but want to do so on OpenAI ONLY campaign.

- Please provide Product Feed.

Package 4: HYBRID OPENAI AND PERFORMANCE MEDIA CAMPAIGN: Criteo Performance Media partners who want to leverage their existing Product Feed with Criteo and add OAI as an additional inventory channel. Blended OpenAI and regular Performance Media inventory (targeting on web, social, video does NOT transfer to OpenAI environment). Up to 70% of the campaign can be dedicated to the OpenAI adset.

- Please provide Product Feed.
- Please provide Budget Split: OpenAI / Criteo

Additional information and recommendations for ChatGPT Ads campaigns

Preferred packages

- Package 1: Branding
- Package 2: Customer-Defined Offline Product Set
- Package 3: OpenAI-Dedicated Automated Campaign
- Package 4: Hybrid OpenAI and Performance Media Campaign

Budgets

- **Standalone campaigns (Packages 1–3):** currently the equivalent of USD 50,000 per month. We can request an exception, if needed.
- **Hybrid campaigns (Package 4):** there is *no hard monthly minimum*, but we recommend at least €10,000 in incremental budget.

Tracking / UTMs

If you do not have any specific UTM requirements, we would use the following standard setup: utm_source=criteo&utm_medium=open_ai&utm_id={{adsetid}}

With a hybrid setup, OpenAI and the other inventory sources can be tracked separately.

Feed and assets

To make the feed as suitable as possible for ChatGPT Ads, we recommend the following:

- Keep product descriptions to a maximum of 60 characters wherever possible. Longer descriptions will be shortened automatically.
- Keep the feed up to date and complete, with well-maintained product descriptions and clear, representative product names.
- Provide as many suitable products as possible. Up to 50,000 products can currently be considered.
- Formulate descriptions in a benefit- and need-oriented way, focusing on the specific use case and purchase intent.
- For feed-based packages, product names should ideally remain under 30 characters. We also need publicly accessible HTTPS product pages and reachable, square product images.

In addition, we need the name that should be displayed in the ChatGPT Ads, as well as a square logo or favicon URL, ideally with a minimum size of 128 × 128 pixels.

To access deeper measurement, a OneTag and Product Feed must be in place.

While going live without the tags is permitted, the working expectation is that the advertiser should implement OneTag within the first 30 days unless the package is a branding flow with no expectation of OneTag.

Whitelisting OpenAI crawlers

Please also share this information with your technical or security team. OpenAI needs to be able to crawl the landing pages to review the pages and up-to-date product information, such as price and description. In particular, the **OAI-AdsBot** should be whitelisted. The **OAI-SearchBot** is also recommended.

If the crawlers are blocked, for example by robots.txt, a firewall, a CDN or a bot-protection tool, delivery may be limited or may not start. This change needs to be made by your technical team and cannot be implemented by Criteo.

Here is the official information from OpenAI:

- Overview of OpenAI Crawlers
- Advertiser Guidance for Allowing OpenAI Web Crawlers

Advertiser review request

Certain advertiser verticals are restricted, as flagged by OpenAI's ad policy. Nonetheless, a review request can be submitted to validate eligibility on a case-by-case.

Your Criteo team can submit a request early on with your input on the following:

- Please describe the specific approach this advertiser will take, including a URL directing toward that approach. For example, financial services website pushes to educational content on their blog.
- Advertiser URL (specific URL as possible, general URLs may be turned down if they are aligned to Financial Services or Insurance)

Strategies and setup

This is not a typical programmatic advertising solution. It is a context-based opportunity with no guaranteed performance. The objective is to explore, pioneer, and evaluate the role of ChatGPT in the path to purchase, especially on the upper-funnel.

Two best practices are emerging

- ChatGPT ads are proving particularly effective as an upper-funnel traffic driver.
- A hybrid setup is recommended, combining ChatGPT ads to generate qualified traffic with GO retargeting to re-engage users further down the funnel.
