

Conversion mastery: Tracking, goals & Performance Max essentials

February 24, 2026

 Microsoft Advertising

Microsoft's mission is to empower every person and every organization on the planet to achieve more. This includes all Microsoft events and gatherings, including on digital platforms and in person, where we seek to create a respectful, friendly, enjoyable, and inclusive experience for all participants.

We expect all event participants to uphold the principles of this Code of Conduct. The Code of Conduct applies to all aspects of the main event and any related activities, whether digital or in person.

Microsoft does not tolerate the following in any aspect of the event program, including business and social activities:

- Behavior that is disruptive, disrespectful, or degrading to others, including any messages, images, or interactions by anyone, in any form, regardless of location.
- Harassment or discrimination based on age, ancestry, color, gender identity or expression, national origin, physical or mental disability, religion, sexual orientation, or any other characteristic protected by applicable local laws, regulations, and ordinances.

- We encourage everyone to assist in creating a welcoming and safe environment. Please report any concerns, harassing behavior, or suspicious or disruptive activity to venue staff, the event host or owner, or the nearest event staff.
- We also encourage everyone to contact Microsoft's Business Conduct Hotline at any time if you feel anything or anyone is not following this Code of Conduct or is inconsistent with Microsoft's culture. The Hotline is available regardless of whether you are a Microsoft employee and can be reached at or +1 (877) 320-MSFT, or call collect outside the United States at +1 (720)-904-6844. Microsoft employees can also report any concerns to their Microsoft Manager.

Microsoft reserves the right to refuse admittance to or remove any person from a Microsoft event at any time at its sole discretion.

Setting you up for success

Unlock the potential of your search ads with our tracking and optimization solutions. We want to ensure you are set up with precise tracking tags to capture every click and conversion, giving you unparalleled insights.

Optimize your campaigns with sophisticated bid strategies resulting in best return of investment, capturing both online and offline conversions for a complete view of your campaigns performance.

Better tracking

Leveraging our Universal Event Tracking (UET) tags, track the impact of your campaigns across your online channels.

Save time and maximize ad spend

With Automated bid strategies giving you control and flexible offerings to optimize campaign performance.

Better ROI

Make campaign optimizations based on the full impact of your search ads.

Mastering Tracking Tags - Set up

Why UET

Setting up your UET tag

Validate your clients UET tag setup

Consent mode and transparency consent framework

Universal Event Tracking

Track what your customers are doing after they click on your ad. Universal Event Tracking (UET) is a powerful tool that records what customers do on your website. By creating one UET tag and placing it across your website, Microsoft Advertising will collect data that allows you to track conversion goals and target audiences with remarketing lists.

Why UET is critical for advertisers on Microsoft

Make the most of your Microsoft Advertising investments with UET and all the benefits it enables for your business.

More data fidelity and signals

Providing as many intelligent signals as possible allows you to get the best and most informed picture of your advertising, empowering you to make the right decisions for your business.

Less work for you in the future

For privacy landscape, and with any of Microsoft's upcoming solutions, Microsoft will ensure that UET evolves accordingly to easily set you up for the future.

The full menu of benefits unlocked with UET

Conversion tracking

Integrated with Privacy Sandbox for targeting

*We recommend sitewide tagging of JavaScript UET. No iFrames.

When setting up your UET tag

These actions can help you track conversions more accurately, improve your ad performance and prepare your website for important new ad features.

1

Use JavaScript UET tag.

Providing as many intelligent signals as possible allows you to get the best and most informed picture of your advertising, empowering you to make the right decisions for your business.

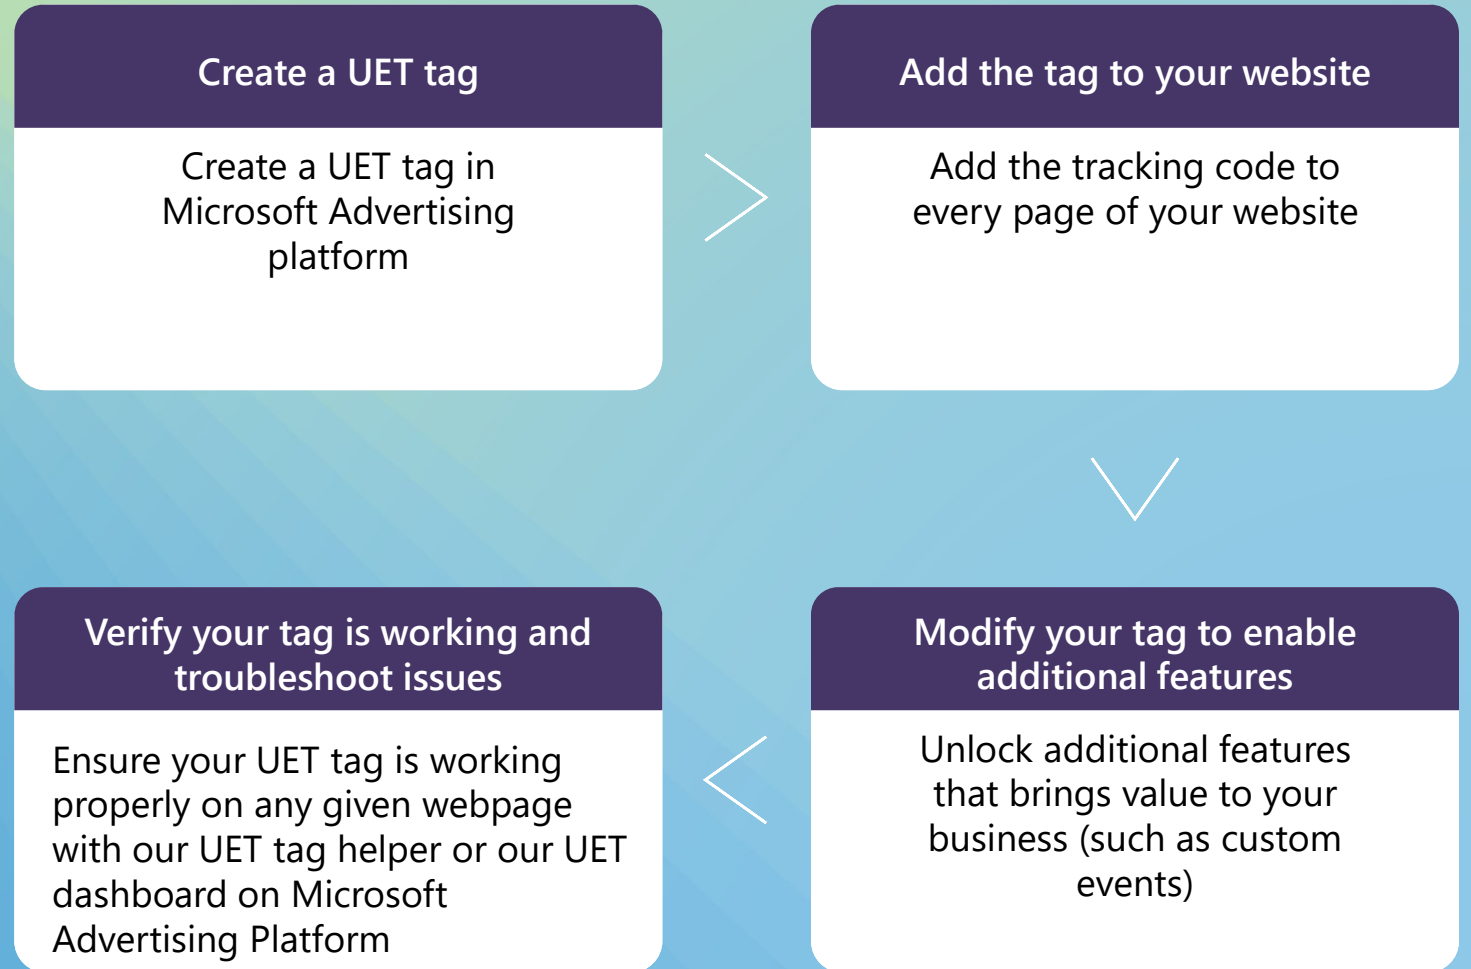

2

Use sitewide tagging.

Add the UET tag to all your webpages and domains, especially the pages where conversion actions are happening (e.g. purchase confirmation page load)

*We recommend sitewide tagging of JavaScript UET. No iFrames.

Everything you need to know about setting up UET

Create a UET tag

- 1 From the navigation menu on the left, hover over **Conversions** and select **UET tag**.
- 2 Select **Create UET tag** and then enter a name.
 - Optional: Enter a description that helps you identify the UET tag in the future. This could relate to the purpose the tag will serve or to the name or URL of your website.
 - Optional: Clear the **Enable Microsoft Clarity** checkbox. [Learn more about UET and Clarity integration.](#)
- 3 Select **Save**.
- 4 In the **View UET tag tracking code** box, select either **Copy**, **Download**, or **Email**, and then close the **View UET tag tracking code** box.

Create a UET tag in Microsoft Advertising, then add the UET tag tracking to every page of your website. Learn more from on our [UET tag guide](#).

View UET tag tracking code

Click **Copy** and then paste the UET tag tracking code into every page of your website. [Learn how](#) | [See examples](#)

If you want to do this later or keep a copy, you can send it in email or download it.

Name: New UET Tag

ID: 123456789

```
<script>(function(w,d,t,r,u){var f,n,i;w[u]=w[u]||[],f=function(){var o={ti:"56055439"};o.q=w[u],w[u]=new UET(o),w[u].push("pageLoad")},n=d.createElement(t),n.src=r,n.async=1,n.onload=n.onreadystatechange=function(){var s=this.readyState;s&&s!="loaded"&&s!="complete"||(f(),n.onload=n.onreadystatechange=null)},i=d.getElementsByTagName(t)[0],i.parentNode.insertBefore(n,i)})(window,document,"script","//bat.bing.com/bat.js","uetq");</script>
```

To ensure accurate conversion tracking measurement, Microsoft Advertising UET tags set first-party cookies. [Learn more](#)

After successfully adding the UET tag to your website, allow 24-hours for your [Microsoft Clarity account](#) to receive data.

Copy

Download

Email

Add the tag to your website

The next step is to add the UET tag tracking code to your website. You can either add the UET tag tracking code directly into your website's code using JavaScript or use a third-party tag manager. Additionally, if your website was built on a website platform (such as Shopify or WordPress), you can use that system to add your UET tag.

Add UET code to your website directly

Paste the UET tag tracking code on every page of your website, either in the head or body section.

Note: before the closing head tag: "</head>") or body section (before the closing body tag: "</body>")

Add UET using a tag manager

UET works with all major tag management systems. Here is the current list of (and links to instructions for) tested and supported tag managers:

- [Google Tag Manager](#)
- [Qubit Opentag](#)
- [Tealium](#)
- [Enlighten](#)
- [Signal](#)
- [Adobe Dynamic Tag Manager](#)
- [Adobe Experience Platform](#)

Add UET using website platform

UET is designed to work with all major website platforms. Here is the current list of (and links to instructions for) tested and supported platforms that allow you to install UET tags:

- [BigCommerce](#)
- [Shopify](#)
- [WordPress.com](#)
- [Wix](#)

Modify your tag to enable additional features

Some targeting and tracking features require you to modify your UET tag. The instructions below assume that you have already created a UET tag and added it to your website.

Custom events

Example of custom events include track people selecting a "download now" button on one of your webpages

Custom e-commerce events

How users interact with the products and services you sell on your ecommerce website
Example include "add to cart" capturing total sales price or revenue

Variable revenue

Each action a customer take whether its making a purchase or signing up for rewards brings a different value to your business. You can custom specific revenue value to each of your conversion goal to track your return on investment

Dynamic remarketing

Dynamic remarketing lists pair customer with specific product based on what they have looked at, considered or already purchased on your website

Multiple features

Combine multiple features that brings value to your business (additional steps to combine)

Enhanced conversions

Supplement existing conversion tracking by using first-party data.

[more info](#)

Verify your tag is working and troubleshoot issues

[UET Tag Helper](#) is a browser extension used to validate that both the Microsoft Advertising UET tag and the conversion goals are working properly on any given webpage.

Set up UET Tag Helper

- Download the [UET Tag Helper](#) in Edge.
- Select **Get**, and then **Add extension**. By installing the UET Tag Helper, you agree to the [Microsoft Service Agreement](#) and [Microsoft Privacy Statement](#).
- Once installed, you will see the UET Tag Helper icon in Edge.

Validate UET tags

- In Edge, go to a webpage that you want to check, and then select the UET Tag Helper icon.
- In UET Tag Helper, flip the toggle **On**, and then refresh the browser page.
- Review the [UET Tag Helper](#) icon status. The color of the badge shows the status, and the number in the badge shows how many times there was a UET tag request from the webpage.

UET Dashboard

[UET Dashboard](#), available for each of your tags, enables you to test your tag, access an Overview of the UET tag, and UET Insights. It gives you deeper insights into your website visitors and their actions. From the navigation menu on the left:

- From Conversions choose UET tag.
- Select the Test tab.
- Enter the URL for your website.

UET and User Consent

UET Microsoft Advertising requires advertisers using our Universal Event Tag (UET) to provide user consent signals where data privacy laws require consent as a lawful basis for processing personal data and/or for activating the UET tag. Advertisers can do this by implementing on their websites either:

- Consent Mode for UET

or

- the IAB's Transparency and Consent Framework (TCF)

This ensures that Microsoft Advertising will only collect and process end users' data through UET in line with their wishes, i.e., when they have given their consent. This also ensures compliance with the applicable terms of service, regulations and industry best practices.

If you implement Consent Mode for UET or the TCF, you will maintain accurate conversion tracking, retargeting, and other essential campaign features.

Note: If you are using the [UET - Clarity integration](#), you must set the consent setting for Clarity separately. [Learn more about Clarity cookie consent.](#)

How consent mode works

Consent Mode is set via a property in UET called *ad_storage*. The possible values for *ad_storage* are:

*If **ad_storage** = 'granted'*

- Cookies pertaining to advertising may be read and written in the 1st party (advertiser domain) or 3rd party context (bing.com).

*If **ad_storage** = 'denied'*

- Write or read 1st party cookies (advertiser domain) — no ads cookies are written or read by UET when the user is on that advertiser website.
- Write 3rd party cookies (bing.com domain) — no ads cookies are written by UET when the user is on that advertiser website.
- Read 3rd party cookies (bing.com domain) — Microsoft 3rd party cookies are not read for advertising purposes; Microsoft 3rd party cookies are read for fraud and spam purposes, only.

More details on [Setting up UET for Consent Mode](#) and if you are using Google Tag Manager refer to [consent mode with Google Tag Manager](#)

Note: *ad_storage* will be denied by default in European Economic Area (EEA), United Kingdom (UK) and Switzerland (CH)

Power Your Business Strategy With Purpose-driven Goals

Conversion goals
Offline conversion

Goal categories for organizing your conversion goal objectives

Conversion type	Sales categories	Leads categories	Other categories
Website	Purchase	Submit lead form	Contact
	Add to cart	Book appointment	Page view
	Begin checkout	Sign-up	Other
	Subscribe	Request quote	
		Get directions	
		Outbound click	
Mobile app install			Download
Offline	Purchase	Submit lead form	Contact
	Add to cart	Book appointment	Page view
	Begin checkout	Sign-up	Store visit
	Subscribe	Request quote	Other
		Get directions	
		Outbound click	

Use goal categories to segment your goals and their performance metrics in a way that is meaningful to your business. Goal categories don't affect performance—they are here to help keep your conversion goals organized

More information can be found on our [help page](#)

Conversion goals and goal types

Conversion goals allow you to specify which actions to count as conversions, as recorded by UET

Goal type	Conversion goal	Example
Website	Destination URL: Count user visits to specific webpages as conversions.	Confirmation page after purchase, Thank you page after lead generation
	Event: Count every time someone completes a specific action--such as signing up for a newsletter or downloading a document--as a conversion.	
	Duration: Count every time someone stays on a website for longer than a certain amount of time as a conversion.	10 minutes or longer spent on a blog or playing a game on the webpage.
	Pages viewed per visit: Count every time someone visits more than a specified number of pages on your website as a conversion.	5 pages viewed on a support site or product catalog.
	Product: Count every time a product is purchased via an ad click.	An ad click leads to an online purchase of a specific product.
Mobile app install	Mobile app install: Count every time someone installs your app as a conversion. To learn more, see Track mobile app installs as conversions .	Installation of your app on Android devices.
Offline	Offline conversion: Track when your ad leads to a conversion outside of your website. To learn more, see Tracking offline conversions .	A search ad leads to an over-the-phone purchase.
	Store visits: Count every time a user visits a store as a conversion.	A search ad leads to a store visit.
	In-store transactions: Count every time a transaction occurs in your store.	A search ad leads to an in-store purchase.

UET tag on your website can track multiple types of conversions. Once the UET tag tracking code is added to your website, Microsoft Advertising can log page visits and any custom events (such as document downloads, signups for a newsletter, etc.).

More information can be found on our [help page](#)

Creating a conversion goal

To track actions people, take on your website after they click on your ad

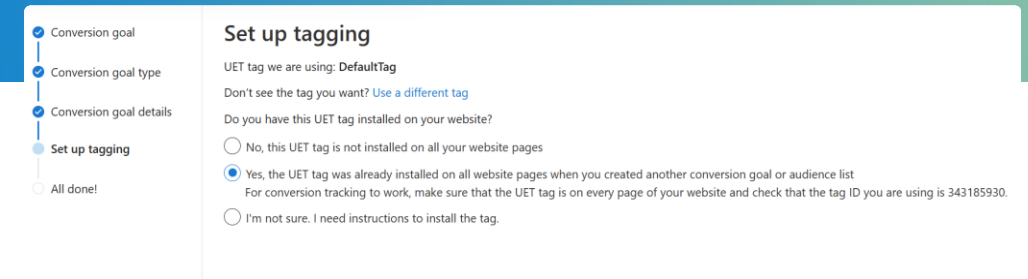

- From the navigation menu on the left, hover over **Conversions** and select **Conversion goals**.
- Select **Create**.
- Choose the type of conversion you want to track: **Website**, **Mobile app install**, or **Offline**.
- Select **Next**.
- Choose a goal category from the dropdown menu and then choose a goal type.
- Enter a name for your goal in the **Goal name** box. When naming your goal, use a descriptive name that makes sense to you. (For example, "Checkout page".) Please note that after you choose a name for your conversion goal, the same name may not be used again in the future.
- Fill in the appropriate values for your selected goal type.
- If you want to add a monetary value for each conversion, select one of the following from the **Revenue**, dropdown menu:
 - **Each conversion action has the same value**, and then enter the amount and select the currency (if available). This is a static revenue value that doesn't change.
 - **Conversion action value may vary (for instance, by purchase price)**, and then enter the default amount and select the default currency (if available) to be used when no value is received for a conversion. The revenue value will change based on the customization you make to the UET tag tracking code that you add to your website. To learn more, see [How to report variable revenue with UET](#). This option is only available for destination URL and event conversion goals.

The screenshot shows the Google Ads interface for creating a conversion goal. On the left is a navigation menu with options: 'Conversion goal' (selected), 'Conversion goal type', 'Conversion goal details', 'Set up tagging', and 'All done!'. The main area is titled 'What type of goal do you want to set?'. It has a 'Goal Category' section with a dropdown menu currently set to 'Purchase'. Below this is the 'Goal Type' section, which says 'Select the type of interaction you would like to track with this goal.' There are three options: 'Destination URL' (with a link icon), 'Event' (with a cursor icon), and 'Product' (with a box icon). Each option has a brief description of what it tracks.

Creating a conversion goal (cont.)

To track actions people, take on your website after they click on your ad

- Fine-tune your conversion goal with **Advanced settings**:
 - Set the **Scope** of this goal to all accounts or a specific account.
 - Change how you **Count** your conversions. [Learn more](#).
 - Enter a **Conversion window** to track up to 90 days in the past.
 - Set a **View-through conversion window** to track conversions that occur in this period of time after a customer views (but doesn't click) your ad. [Learn more about view-through conversions](#).
 - Check or clear the **Include in "Conversions"** checkbox depending on whether or not you want to track all conversions. Learn more about ["Conversions" versus "All conversions"](#).
- Select **Next**.
- Select the UET tag that you want to associate with this conversion goal (not applicable to offline conversions).
- Choose an answer for **Do you have this UET tag installed on your website?**
- Select **Save and next**.

The screenshot shows the 'Set up tagging' step in the Google Ads conversion goal setup process. On the left, a vertical progress bar indicates the current step is 'Set up tagging', with previous steps 'Conversion goal', 'Conversion goal type', and 'Conversion goal details' completed. The main content area is titled 'Set up tagging' and shows 'UET tag we are using: DefaultTag'. Below this, it asks 'Do you have this UET tag installed on your website?'. There are three radio button options: 'No, this UET tag is not installed on all your website pages', 'Yes, the UET tag was already installed on all website pages when you created another conversion goal or audience list' (which is selected), and 'I'm not sure. I need instructions to install the tag.' A link 'Use a different tag' is also visible.

Why am I not recording conversions or tracked revenue?

Follow this troubleshooter:

Has it been more than 24 hours since you set up this UET tag or this conversion goal?

It can take up to 24 hours for Microsoft Advertising to receive data from a new UET tag or conversion goal. Wait until 24 hours have passed and check again.

What is your conversion goal's tracking status?

From the navigation menu on the left, hover over Conversions and select Conversion goals. and check the Tracking status column for this conversion goal.

- Tracking status is "Unverified" or "Tag inactive": Follow the steps in next section of this article.
- Tracking status is "No recent conversions": Follow the steps in [this section](#) of the article.

Have you added the UET tag to your website's code?

No	Your UET tag must be inserted into the code of each page of your website for conversion tracking to work. For instructions, refer to the "Add the tag to your website" section of this article .
Yes	There are three likely scenarios: You didn't add the UET tag to every page of your website. You didn't add the UET tag correctly. You added the wrong UET tag.

With [simplified setup of conversion goals](#), you can select events of interest, automatically detect those events on your website, and suggest which ones to track as conversions.

This **eliminates the need for selecting events manually** and **simplifies your workflow** since you will not need to use code for any configuration. Button clicks, page visits, purchases, checkouts, and subscriptions can all be detected.

To use simplified setup of conversion goals, you only need to set up a UET tag on your website, and review and accept the automatically detected events that you'd like to track as conversions.

Use the Excel import template

The screenshot shows an Excel spreadsheet with the following content:

	A	B	C	D	E	F
1	#### INSTRUCTIONS ####					
2	# Important: Remember to change the TimeZone value (GMT offset) in the "parameters" row					
3	# TimeZone values should be entered in HHMM format (e.g. New York is -0500 and Berlin is +0100. If you use Greenwich Mean Time, simply					
4	# Make sure you do not include additional columns. For more instructions on how to use this tempate, visit https://aka.ms/dk8o1y					
5						
6						
7	#### TEMPLATE ####					
8	Parameters:TimeZone=+0000					
9						
10	Microsoft Click ID	Conversion Name	Conversion Time	Conversion Value	Conversion Currency	

Microsoft Click ID

The msckid led to the conversion

Conversion Name

Same as the conversion goal (case insensitive)

Conversion Time

The date and time that the conversion occurred

Conversion Value

(Optional) Non-negative, 0 to 999999999999 with 3 decimal fields

Conversion Currency

(Optional) The currency in which the conversion value is provided

Getting started— use the Excel import template

Format	Examples (Time zone values from this list)
MM/dd/yyyy hh:mm:ss aa	"08/14/2012 5:01:54 PM"
MMM dd,yyyy hh:mm:ss aa	"Aug 14, 2012 5:01:54 PM"
MM/dd/yyyy HH:mm:ss	"08/14/2012 17:01:54"
yyyy-MM-dd HH:mm:ss	"2012-08-14 13:00:00"
yyyy-MM-ddTHH:mm:ss	"2012-08-14T13:00:00"
yyyy-MM-dd HH:mm:ss+z	"2012-08-14 13:00:00+0500"
yyyy-MM-ddTHH:mm:ss+z	"2012-08-14T13:00:00-0100"
yyyy-MM-dd HH:mm:ss zzzz	"2012-08-14 13:00:00 EasternTimeUSCanada"
yyyy-MM-ddTHH:mm:ss zzzz	"2012-08-14T13:00:00 EasternTimeUSCanada"

TimeZone information is required and can be entered in two places:

- 01 | Enter GMT offset in the TimeZone file which applies to all conversions in the file.
- 02 | Add a TimeZone to the conversion time (GMT or TimeZone ID).

If TimeZone exists in both places, conversion time will be used.

Only support conversions occurred within the past 90 days.

File limitations - Max 100K rows per upload and less than 200MB file size.

Enhanced conversions for **offline** conversions

For offline conversions, you can upload or import conversion data into Microsoft using first-party customer data from your website lead forms. If the data that's uploaded via offline conversions isn't hashed, we'll detect that it has not been hashed and send an error.

HOW IT WORKS

01

User clicks on your ad and arrives on your site.

02

User browses your site and reads about your product/service.

03

User fills in a form on your site and becomes a lead. Your website sends Microsoft hashed lead information (e.g. email) that you specify.

04

When a lead converts, you upload the hashed lead information. Microsoft matches the hashed information back to the ad that drove the lead.

Setting up an offline enhanced conversion goal

- ① Create a conversion goal. Tools -> Conversion goals -> + Create
- ② Select 'Offline' as the kind of conversions you'd like to track.
- ③ Select the goal category and goal type according to your preferences.
- ④ Set your goal settings according to your preferences .
- ⑤ Select 'Turn on enhanced conversions' and select the associated privacy checkbox, select 'Next' and you've completed creating the conversion goal.
- ⑥ To upload the offline conversions, download the import template from Tools -> Offline Conversions -> Uploads, and fill the data according to the instructions on the template.
 - a) **Follow the required hashing rules for the email address/ phone number and add the hashed versions of the data into the last two columns of the template.** [Learn more.](#)
 - b) Upload the filled file to the Uploads page to track conversions.

You can either create a new enhanced conversion goal or update an existing conversion goal to be enhanced.

The screenshot shows the 'Set up Enhanced conversions' page. On the left is a vertical progress bar with steps: 'Conversion goal' (checked), 'Conversion goal type' (checked), 'Conversion goal details' (active), 'Edit goal', 'Enhanced conversions', 'Set up tagging', and 'All done!'. The main content area has a title 'Set up Enhanced conversions' and a note: 'Note: Setting up enhanced conversions will only apply to this conversion goal.' Below this is a section 'Turn on Enhanced conversions' with a description and a 'Recommended' button. To the right is a section 'I don't want to use enhanced conversions' with a warning. At the bottom, there is a checkbox to 'Enable Enhanced conversions for this goal' with a link to Microsoft's terms of use and privacy policy.

← Back to conversion goals

Set up Enhanced conversions

Note: Setting up enhanced conversions will only apply to this conversion goal.

Turn on Enhanced conversions

Improve the accuracy of your conversions by matching them with personal information (i.e., email addresses or phone numbers) from people who convert on your website. Microsoft employs privacy-safe practices to safeguard this information and maintain compliance with data protection regulations. [Learn more.](#)

Recommended

I don't want to use enhanced conversions

You may lose the ability to track certain conversions depending on future policy changes.

Enable Enhanced conversions for this goal

☐ By enabling enhanced conversion tracking, you agree to Microsoft [terms of use](#) and [privacy policy](#).

Offline Conversions via API instead of UI

- Support C#, Java, PHP and Python
- SDKs are available for all supported languages
- Require development effort from customer side

```
offline_conversion_bulk.py
1 from auth_helper import *
2 from bulk_service_manager_helper import *
3 from output_helper import *
4
5 # You must provide credentials in auth_helper.py.
6
7 def main(authorization_data):
8     try:
9
10         upload_entities = []
11
12         bulk_offline_conversion = BulkOfflineConversion()
13         offline_conversion = set_elements_to_none(campaign_service.factory.create('OfflineConversion'))
14         # If you do not specify an offline conversion currency code,
15         # then the 'CurrencyCode' element of the goal's 'ConversionGoalRevenue' is used.
16         offline_conversion.CurrencyCode = "USD"
17         # The conversion name must match the 'Name' of the 'OfflineConversionGoal'.
18         # If it does not match you won't observe any error, although the offline
19         # conversion will not be counted.
20         offline_conversion.ConversionName = "Offline Testing01"
21         # The date and time must be in UTC, should align to the date and time of the
22         # recorded click (MicrosoftClickId), and cannot be in the future.
23         offline_conversion.ConversionTime = datetime.utcnow()
24         # If you do not specify an offline conversion value,
25         # then the 'Value' element of the goal's 'ConversionGoalRevenue' is used.
26         offline_conversion.ConversionValue = 10
27         offline_conversion.MicrosoftClickId = "MSClickID_Goes_Here"
28         bulk_offline_conversion.offline_conversion = offline_conversion
29
```

Conversions API

Designed to collect server-to-server (s2s) conversions from various data sources, including web, app, offline conversions and in-store purchases.

Timeline: pilot to begin May 2025

Requires preapproval process

Automated bidding designed to meet your goals

Maintain Control

You set your budget, select the bid strategy, and set targets.

Flexible Offerings

Select different goals for different campaigns – whether you want to hit an impression share, cost per acquisition (CPA), return on ad spend (ROAS) target, or volume of clicks or conversions.

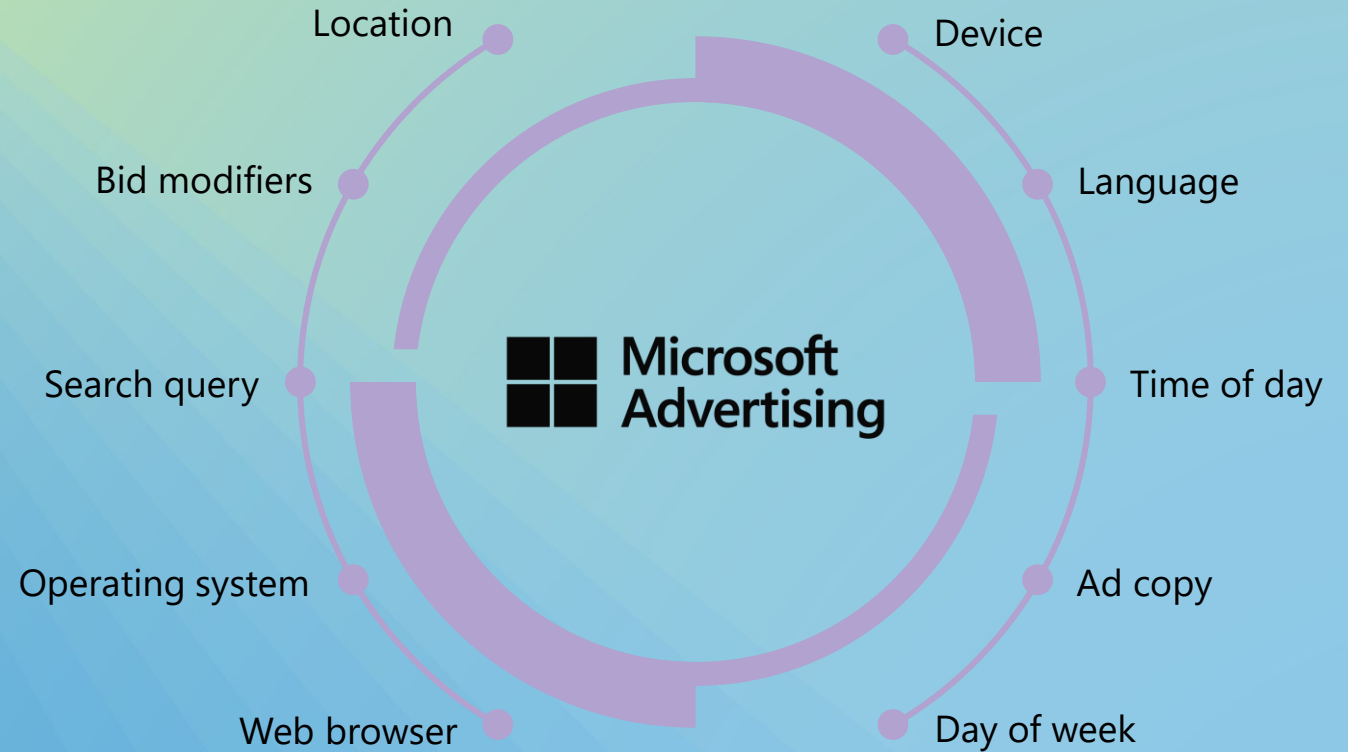

Real-Time and Data Driven

Advanced technologies, always improving.
Optimized to the user at the auction level.

Exclusively Focused on Your Success

All decisions and optimizations help you achieve your advertising goals and performance targets.

Key auction signals for automated bidding

*Universal Event Tracking (UET) conversion tracking data signals are also considered in Automated bidding optimizations, if available. If not available, auction-time signals depicted here are used to determine conversion likelihood.

Automated Bidding strategy choices

Enhance CPC (default)

Automatically increases or decreases your bid based on the predicted clicks and conversions

Maximize Clicks

Helps you get as many clicks as possible.

Target Impression Share

Control ad placement and impression share.

Target CPA

Helps you get as many conversions as possible for the given CPA target.

Target ROAS

Helps you gain as much conversion value/revenue as possible for given ROAS target.

Maximize Conversions

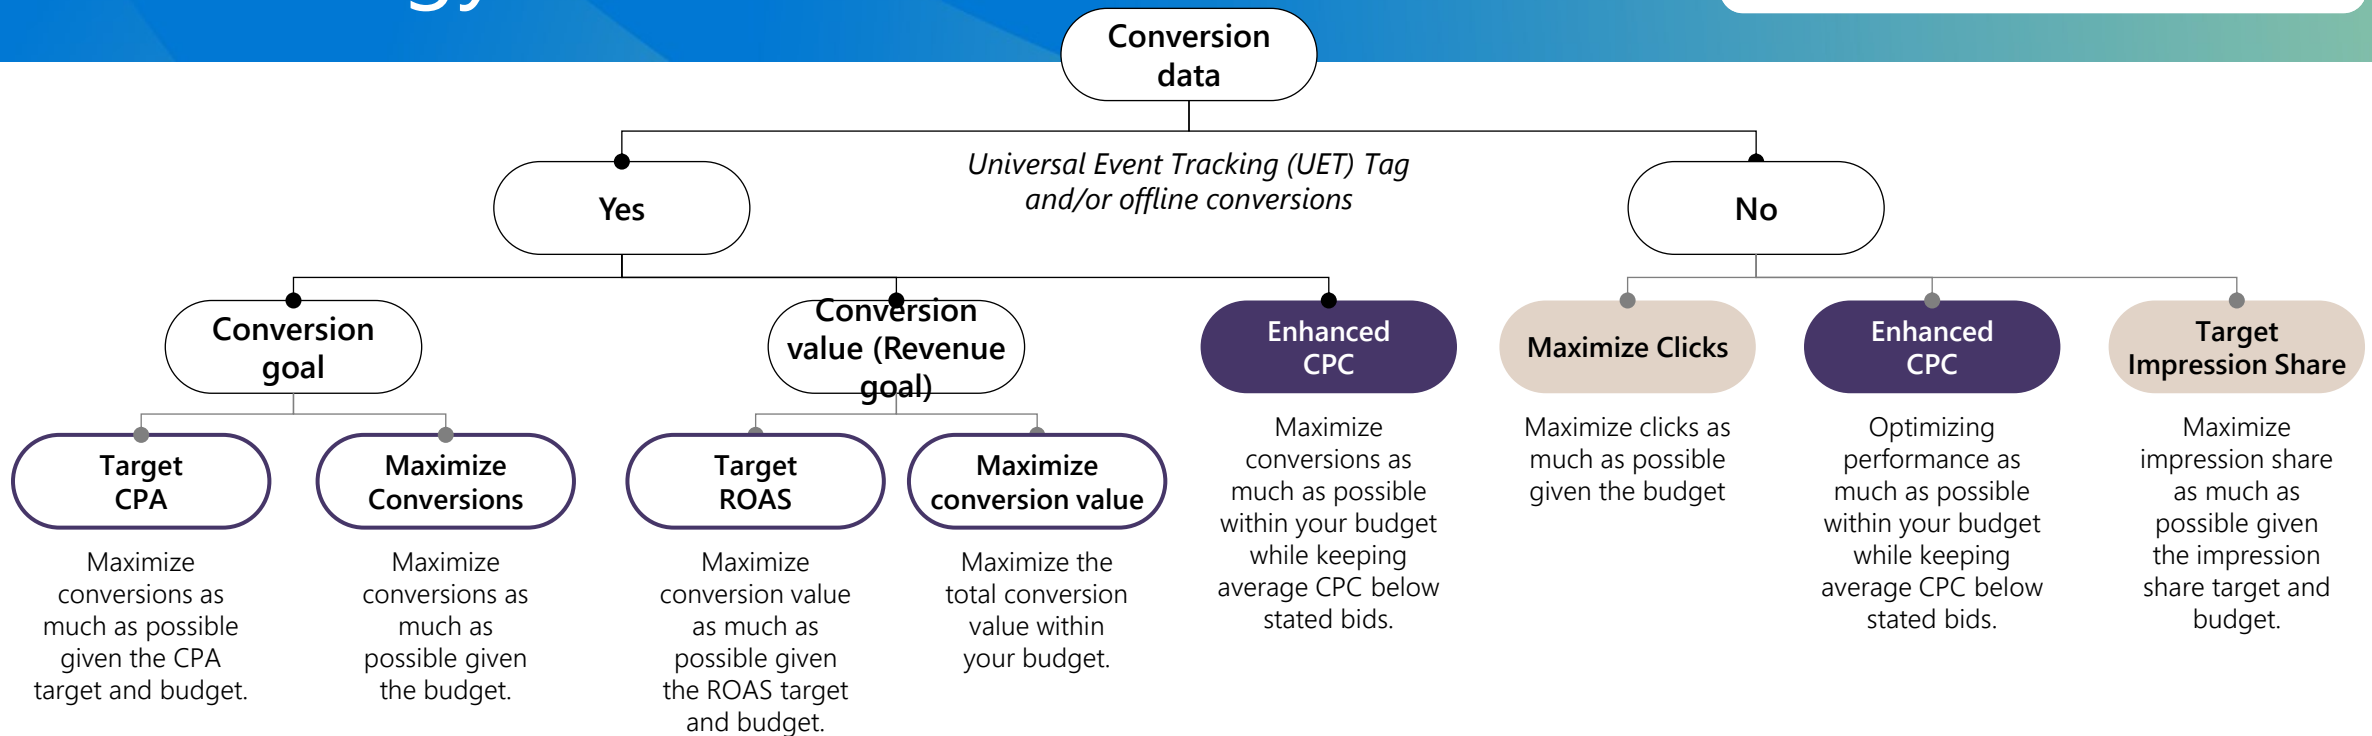

Helps you get as many conversions as possible.

Maximize Conversion Value

Maximize the total conversion value within your budget or ROAS target.

Selecting the optimal automated bid strategy

-  Recommended if using manual, in-house/technology provider bidding
-  Eligible with Portfolio Bid Strategies
-  Eligible with Seasonality Adjustments

Note: for even greater control, you can use maximum cost per click (CPC) for Maximize conversions, Maximize clicks, Target CPA, or Target ROAS.

Bidding strategy compatibility details

Bidding type	Conversion tracking	Campaign compatibility	Compatible with third-party or in-house bidding	Markets*
Enhanced CPC (default for Search)	Recommended but not required	Search, shopping, audience	Yes, complements third-party /in-house bidding	Global
Maximize Clicks	Not required	Search, shopping	No, bids are exclusively managed by Microsoft Advertising	
Maximize Conversions	Required (UET and/or Offline)	Search, audience, PMax		
Maximize Conversion Value	Required (UET and/or Offline)	Search, shopping , PMax		
Target CPA	Required (UET and/or Offline)	Search, audience		
Target ROAS	Required along with the revenue parameter in UET or offline goals	Search, shopping		
Target Impression Share	Recommended but not required	Search		

Set a maximum CPC (cost per click)

To set a maximum CPC, your campaign must use one of the follow bid strategy types: Maximize conversions, Maximize clicks, Target CPA, or Target ROAS. If your campaign uses one of these bid strategies, follow these steps:

- 1 From the navigation menu on the left, hover over **Campaigns** and select **Settings** > **Settings**.
- 2 In the table, select the name of the campaign you want to edit.
- 3 In your campaign settings, under **Bid strategy**, select the checkbox next to **I want to set a maximum CPC**.
- 4 Set the maximum CPC amount you want to apply.
- 5 Select **Save**.

Duration of learning period and elements contributing to the learning process

The learning period is applicable only to new campaigns or bid strategies (initial 1–2 weeks). After this phase, incremental optimization such as adjustments to bids, targets, or budgets won't initiate a new learning period although ongoing optimization will continue. The degree of learning is influenced by factors like change magnitude, conversion numbers, and any conversion delays, potentially leading to a brief adjustment period.

Note: Changes are not recommended during the initial learning period after starting a new campaign or bid strategy.

Scenario	Learning period	Incremental optimization
A new campaign/ portfolio has been newly created or a campaign/ portfolio has been moved to a new bid strategy.	Initial learning period is 1–2 weeks, however higher conversions can contribute to a shorter learning period and lower conversion contribute to longer learning period. Our platform usually needs 1–2 weeks to optimize for your campaign. Avoid changing budgets or conversion goals during this period, as this may cause the learning period to prolong. We recommend <i>not</i> evaluating the bid strategy's performance based on these 2 weeks.	Not applicable
A campaign/ portfolio has added/removed a main conversion goal.	Not applicable	Incremental optimization is 2 weeks + conversion delay, however higher conversions can contribute to a shorter learning period and lower conversion contribute to longer learning period. Let your campaign run for 2–4 weeks and then start evaluating the bid strategy's performance. Keep conversion delay in mind while evaluating performance and refer to our best practices .

Things to know

01

Any conversion goal-related change, such as changing the goal definition, creating a new goal, or making a goal main/non-main, can be considered a tangible change that can impact auto bidding optimization.

04

As auto bidding involves machine learning models, all suggestions shared are general guidance and not hard rules unless specified otherwise. There are always likely to be some exceptions based on specific nuanced scenarios.

02

If you don't or can't upload offline conversions daily, we recommend not using Target CPA. For best results, upload offline conversions within two days of the conversion.

05

To optimize well, a portfolio needs at least 30 conversions in the last 30 days. This total can come from one or multiple campaigns within the portfolio.

03

Conversion delay is the number of days between a click and a conversion. As this can vary for each click, we loosely define it as the number of days it takes for 90% of the conversions to materialize.

Performance Max

 Microsoft Advertising

Performance Max: one campaign bringing together the best of Microsoft's automation to find you more conversions

You architect the strategy with goals, assets, and signals. Our AI dynamically creates and optimizes ads across all Microsoft Advertising surfaces to maximize performance.

Performance Max

Maximize your results, as you define it, with one AI-powered campaign across all Microsoft inventory

Drive more results

Drive net-new conversions and capture more high-ROI conversion opportunities and get clear insights into what's driving performance.

Optimize with Microsoft AI

You architect the strategy to effectively reach your highest-performing audiences, and Microsoft's AI-powered multi-format, cross-channel optimization does the rest to maximize your ROI

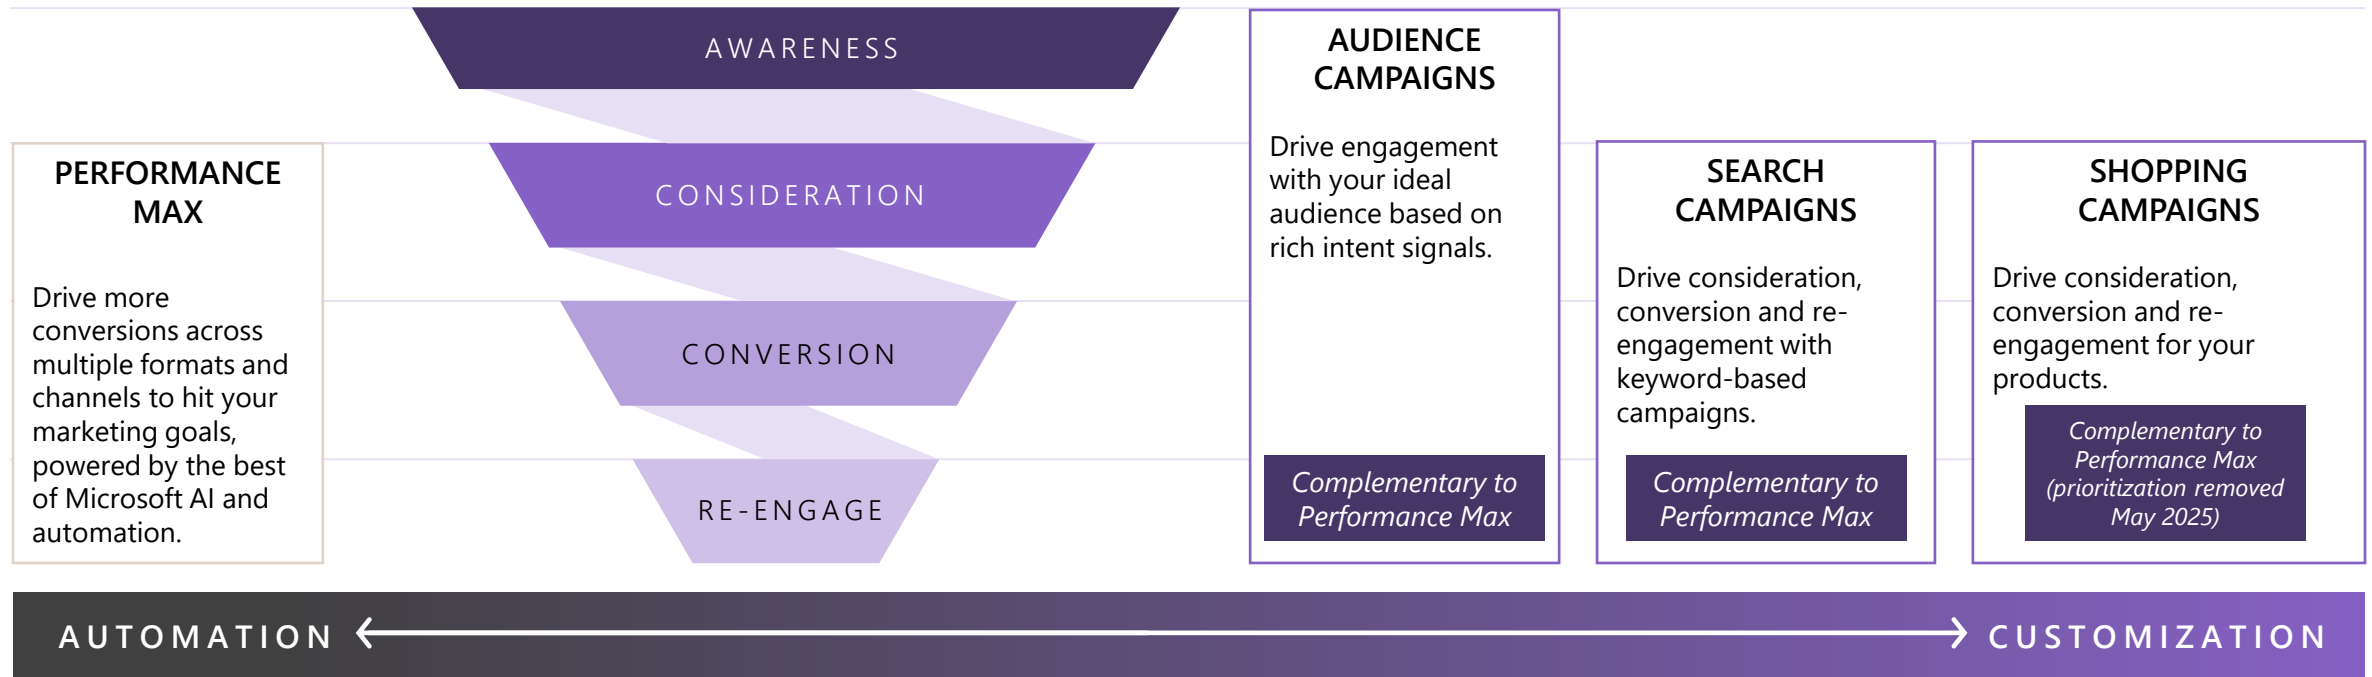

Scale with a unified campaign

Tap into inventory and opportunities often missed with siloed campaign setups, and reach high-value audiences across Microsoft properties, including Copilot.

How to reach your goals throughout the funnel

Performance Max complements and augments your existing Microsoft Advertising strategy across the funnel

Performance Max delivers *the best of Microsoft AI and automation* to drive results based on your marketing goals

Audience, search, and shopping campaigns can help you drive more volume with a more *customized strategy*

Performance Max – Unique features at Microsoft

- ❑ Does not require a Video asset
- ❑ A focus on high intent ads like Search
- ❑ Layer LinkedIn targeting as signal
- ❑ Multimedia Ads
- ❑ Can serve ads in Copilot
- ❑ Often more efficient than Performance Max on Google

UET tag is the basis of Automation: Key steps for success

1

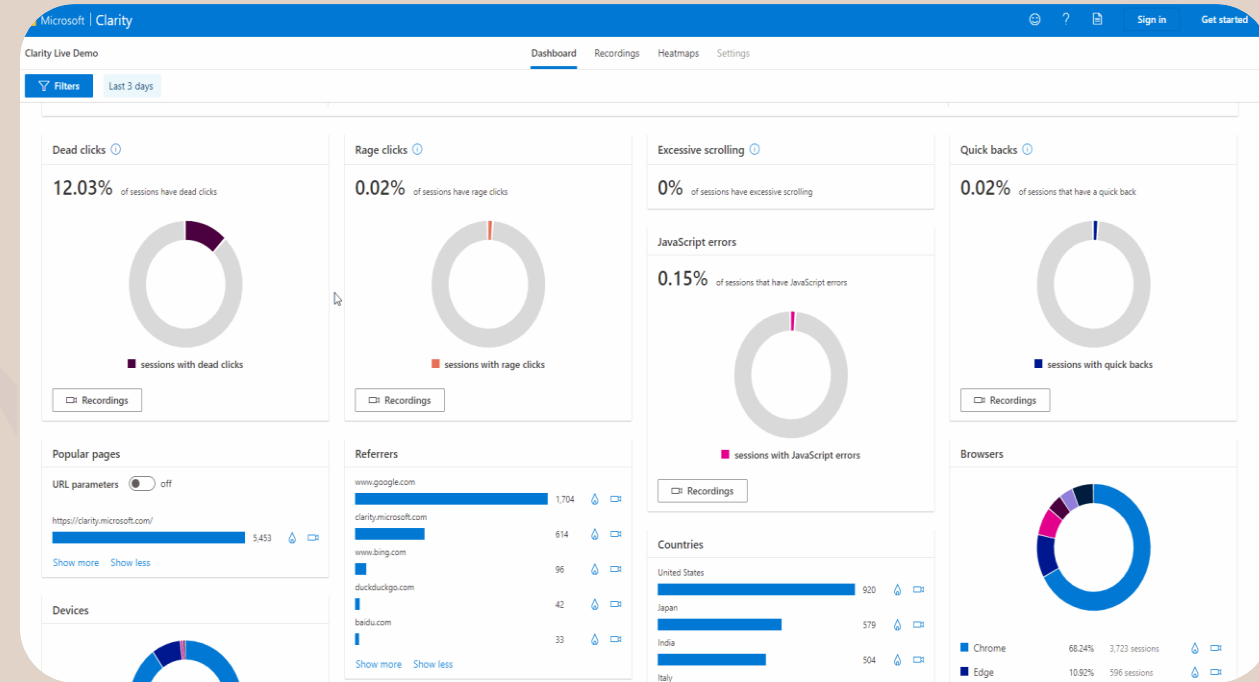

Universal Event Tracking: 1 tag to rule them all!
Implement it on every page directly or through
Tag managers

2

Update your UET tag with **Consent Mode** and all
recommended parameters, i.e. page type and product
ID for Dynamic Remarketing, dynamic revenue or
custom events, etc. Create conversions goals

3

Leverage troubleshooting tools (UET Dashboard,
Insights, UET Tag Helper), and Clarity to ensure
everything works as it should.

Get started quickly by importing from Google

The screenshot shows the 'Import from Google Ads' interface. On the left, a progress bar indicates the steps: 'Sign in with Google' (completed), 'Choose accounts' (completed), and 'Start your import' (current step). The main area is titled 'Start your import' and includes a sub-header 'Name your import' with a text box containing 'Now Import - F145P7D9 - 2022-12-04' and a '221 characters remaining' indicator. Below this is a 'Set schedule' section with a dropdown menu set to 'Now'. At the bottom, there are 'Back', 'Start import', and 'Advanced import' buttons.

After ensuring you have the Universal Event Tracking (UET) tag in place with conversion tracking, import your Google Performance Max campaigns in just a few clicks

[See more information in the Google Import PMax guide!](#)

The screenshot shows the 'Which campaigns and ad groups do you want to import?' screen. It has two radio buttons: 'Import all existing and new campaigns' (unselected) and 'Import specific campaigns and ad groups' (selected). Below is a search bar and a table of campaigns. The table has columns for 'Campaign', 'Type', and 'Ad groups selected'. Two campaigns are listed and selected: 'Website traffic-Performance Max-1' and 'Website traffic-Performance Max-2', both of type 'Performance Max' and with 'All existing and new' ad groups selected. A third campaign, 'Website traffic-Search-1', is listed but not selected, with type 'Search' and 'None' ad groups. At the bottom, there are checkboxes for 'Show paused campaigns' and 'Show paused ad groups', both of which are checked. Navigation buttons 'Back', 'Next', and 'Cancel' are at the bottom.

Campaign	Type	Ad groups selected
☒ Website traffic-Performance Max-1	Performance Max	All existing and new
☒ Website traffic-Performance Max-2	Performance Max	All existing and new
☐ Website traffic-Search-1	Search	None
