Lift measurement

Measure search lift, visit lift, and conversion lift right within the Microsoft Advertising Platform.

Search lift

Are users more likely to search for the advertiser's brand after being exposed to their Audience ads?

Visit lift¹

Are users more likely to visit the advertiser's website after being exposed to their Audience ads?

Conversion lift¹

Are users more likely to convert on the advertiser's website after being exposed to their Audience ads?

1. UET is required.

Prove the impact of your campaigns

Understand whether potential customers are likely to take action after seeing your ads

Users exposed to Audience ads are¹:

SEARCH LIFT

3x

More likely to
search for your brand terms

VISIT LIFT

4x

More likely to
visit your website

CONVERSION LIFT

6x

More likely
to convert

Microsoft Internal Data, January-March 2024. Results may vary for each advertiser based on campaign settings, targeted audiences, and other factors. Lift metrics represent an average of all advertisers with completed lift studies to date. These advertisers may be a non-representative sample of all advertisers on the marketplace. Lift measured between exposed users and a control group of eligible unexposed users, with lift represented on a per-user basis. Average user count per advertiser study = 1.6M. Rounded to whole number. Compared to users who were not exposed.

Data source

- Microsoft Advertising activity
- UET signals

Analysis timeframe

- 3-weeks: under experiment
- 1-week: measuring results

You can get started immediately or schedule your study for the future.

Eligibility criteria

- Live display, native, or video ads
- Audience targeting* associated
- 1M impressions PC only
- UET for visit lift and conversion lift
- Active search campaigns for search lift

AFTER AD EXPOSURE, DO WE SEE AN INCREASE IN...

SEARCH LIFT

Searches for your brand

VISIT LIFT

Visits to your website

CONVERSION LIFT

Conversions on your website

*In market audiences, remarketing, similar audiences, custom audiences, customer match, dynamic remarketing, LinkedIn profile targeting

Understanding lift measurement types

We report specific data points for each lift measurement type, which can be viewed in the platform or in a downloadable CSV file

Search lift

Brand search rate

The number of people who made search queries that contain your brand, products, and/or services versus the number of people who made search queries containing keywords associated to your selected campaign(s).

Visit lift

Website visitation rate

The number of people who visited your website versus the total number of people in the group (Treatment or Control group).

Conversion lift

Conversion rate

The number of people who converted on your website versus the total number of people in the group (Treatment or Control group).

Lift measurement

Setup guide
(for internal users only)

When to run a Lift study

Executing a Lift measurement study is very costly, and capacity is limited. Please only run a study if your client falls within one of these scenarios.

1

Investment

If your client has historically invested heavily in Audience ads and you're looking for growth opportunities.

2

Retention

If there is revenue at risk – e.g., a client is threatening to pull back on spend or pause Audience ad campaigns.

3

Acquisition

When there is opportunity to drive Audience ads activation, keeping in mind results are not guaranteed.

4

Optimization

When identifying audience targeting optimizations – e.g., increase bids and/or expand targeting efforts, etc.

01

Considerations before setting up

Please **evaluate the client need** and consider the following prior to scheduling a study for your client.

CAPACITY MANAGEMENT

Only set up one study per client at a time.

PHASED APPROACH

If multiple studies are necessary, please phase them out to avoid overloading the system.

PROACTIVE PLANNING

Where possible, schedule the study with a future start date and be mindful of capacity.

PREVENT FAILURES

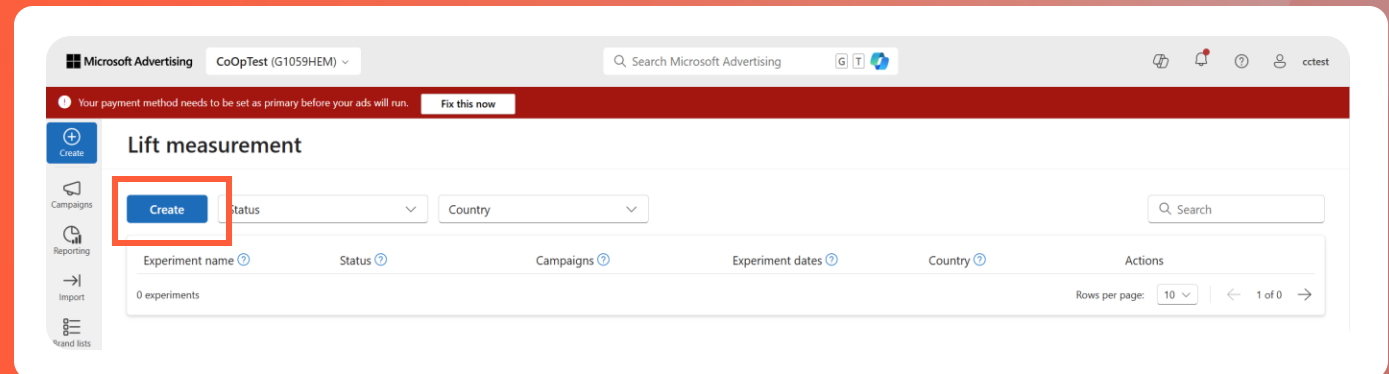

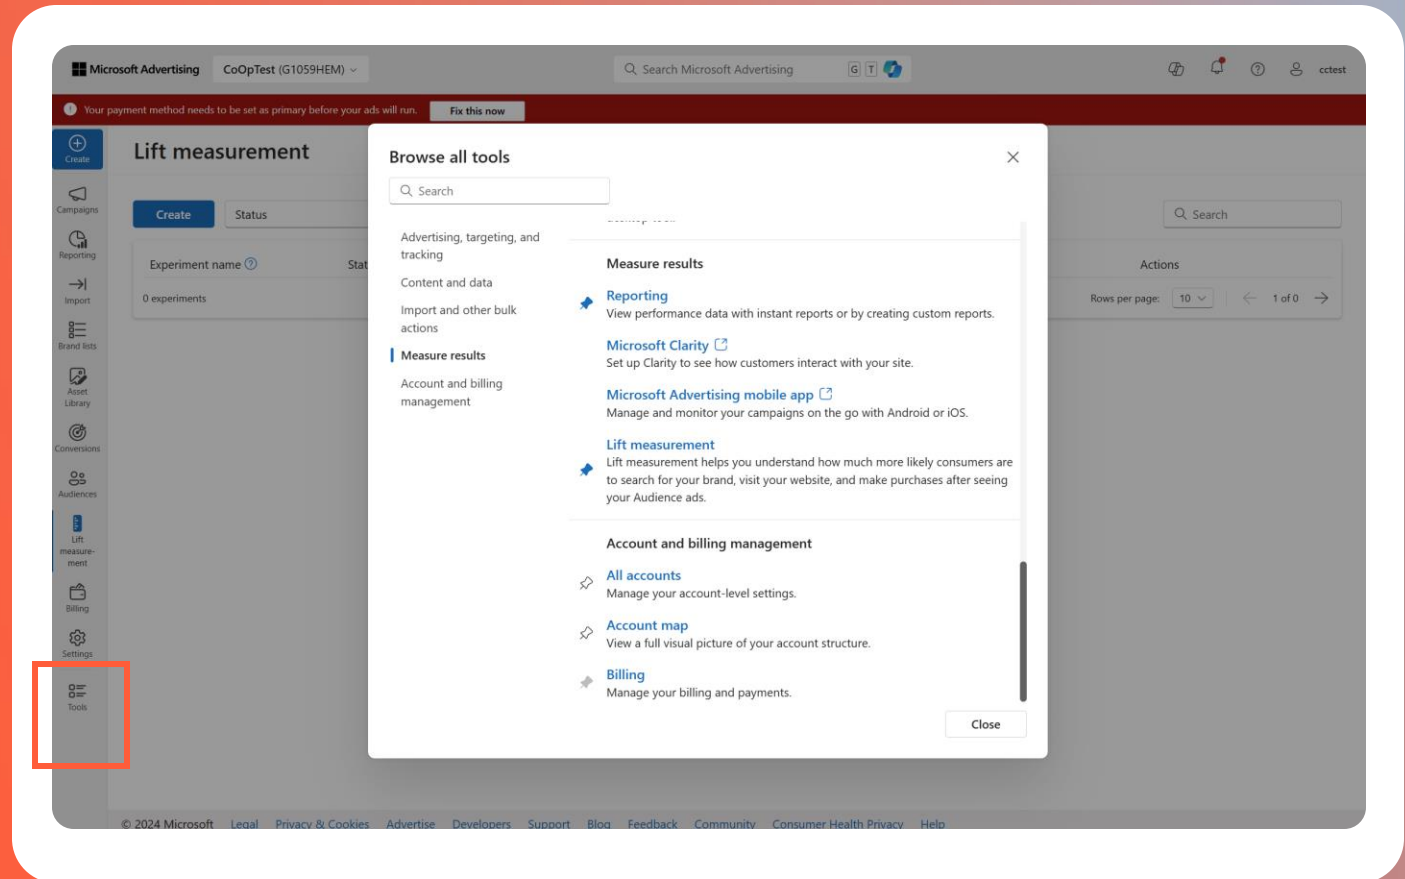

If the system reaches capacity, it's possible the study will fail.

02

Create a lift measurement study

From the navigation menu on the left, select **Tools** > **Measure results** > **Lift measurement**.

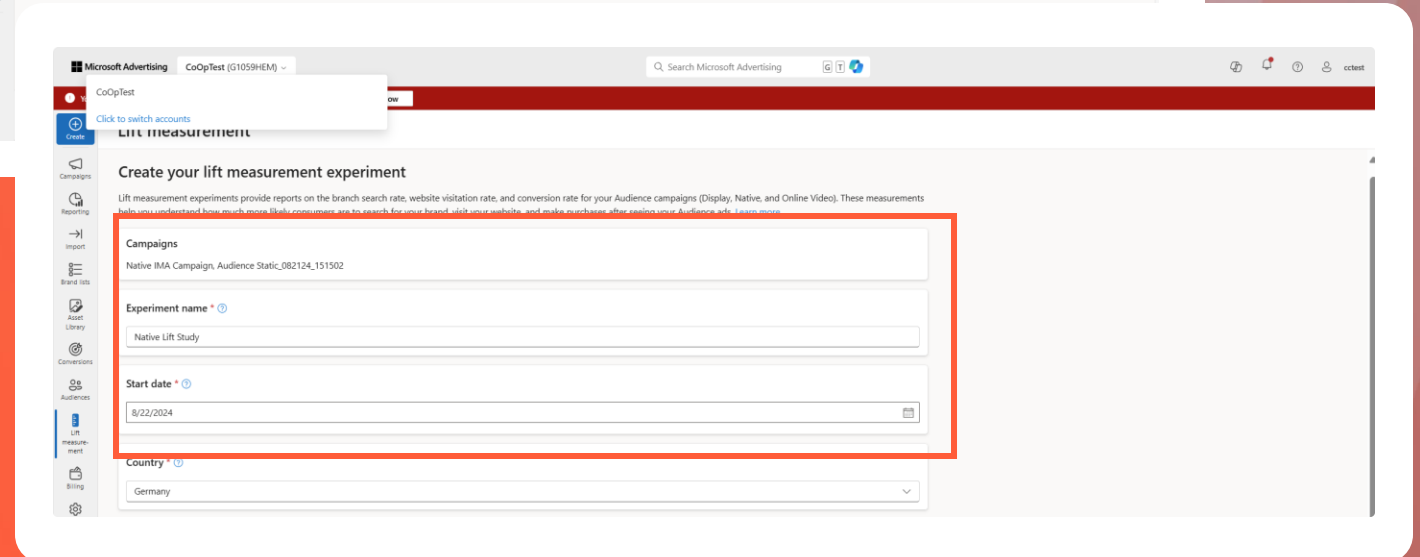

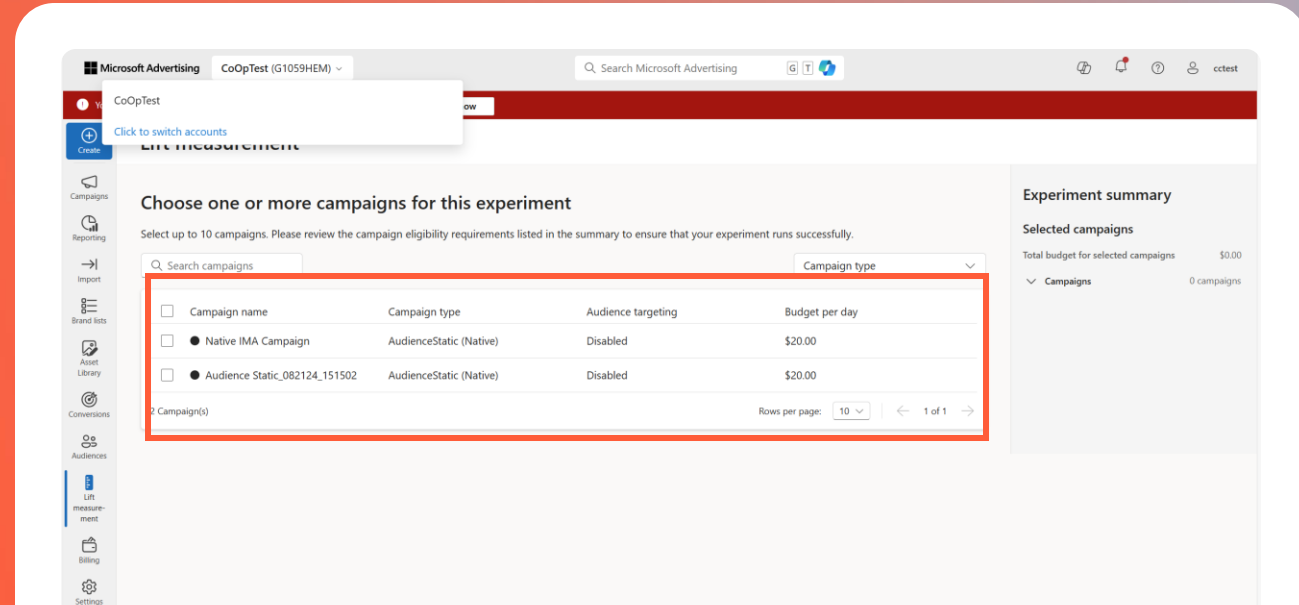

- Select **create**.

03 Select your campaigns

Choose the campaigns you want to include in the experiment.

- Enter a **Name**.
- Select your **Start date**.
- Choose the **Country** where you want to run the experiment.

04 Choose your measurement

Below **Measurement types**, turn on the toggles for **Search lift** and/or **Visit and conversion lift**.

- Add keywords associated with your campaign and brand name.
- If you measure conversion lift, select the appropriate UET tag.

The screenshot shows the 'Measurement types' configuration page in the Microsoft Advertising interface. The left sidebar contains navigation links: Library, Conversions, Audiences, Lift measurement (highlighted), Billing, Settings, and Tools. The main content area is titled 'Measurement types' and contains two sections, each with a toggle and a description.

Search lift (toggle is on):
Measure your brand search rate (search queries that contain your brand) by adding keywords associated with both your campaign and brand name. You can also enter your customer ID to help measure results. Note: If you use different customer IDs for your Audience and Search campaigns, please ensure that you enter the customer ID associated with your Search campaigns.

Select keywords (radio button is selected):
Keywords *
Select keywords (dropdown menu)
Enter keywords (radio button is not selected)

Add customer ID (optional)
G1059HEM (text input field)

Visit and conversion lift (toggle is on):
Measure your website visitation rate and/or conversion rate. For both measurement types, you'll need to select the appropriate UET tag for your website.

Measure visit and conversion lift (radio button is selected):
UET tags *
demo Test, test1 (dropdown menu)
Measure conversion lift only (radio button is not selected)
Measure visit lift only (radio button is not selected)

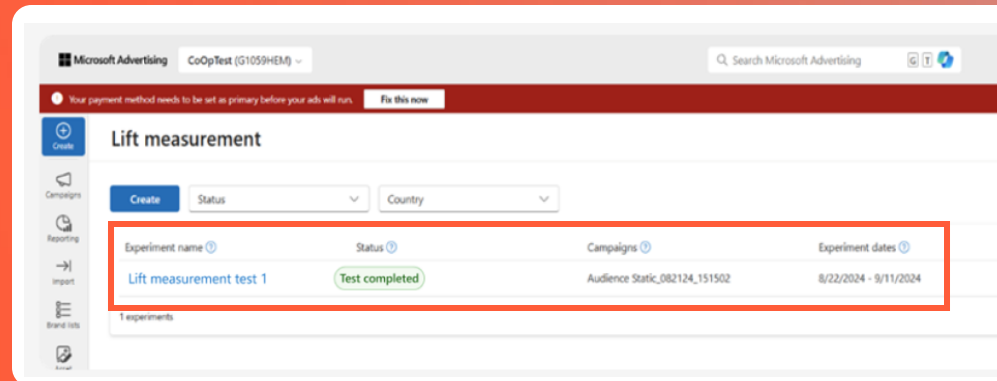

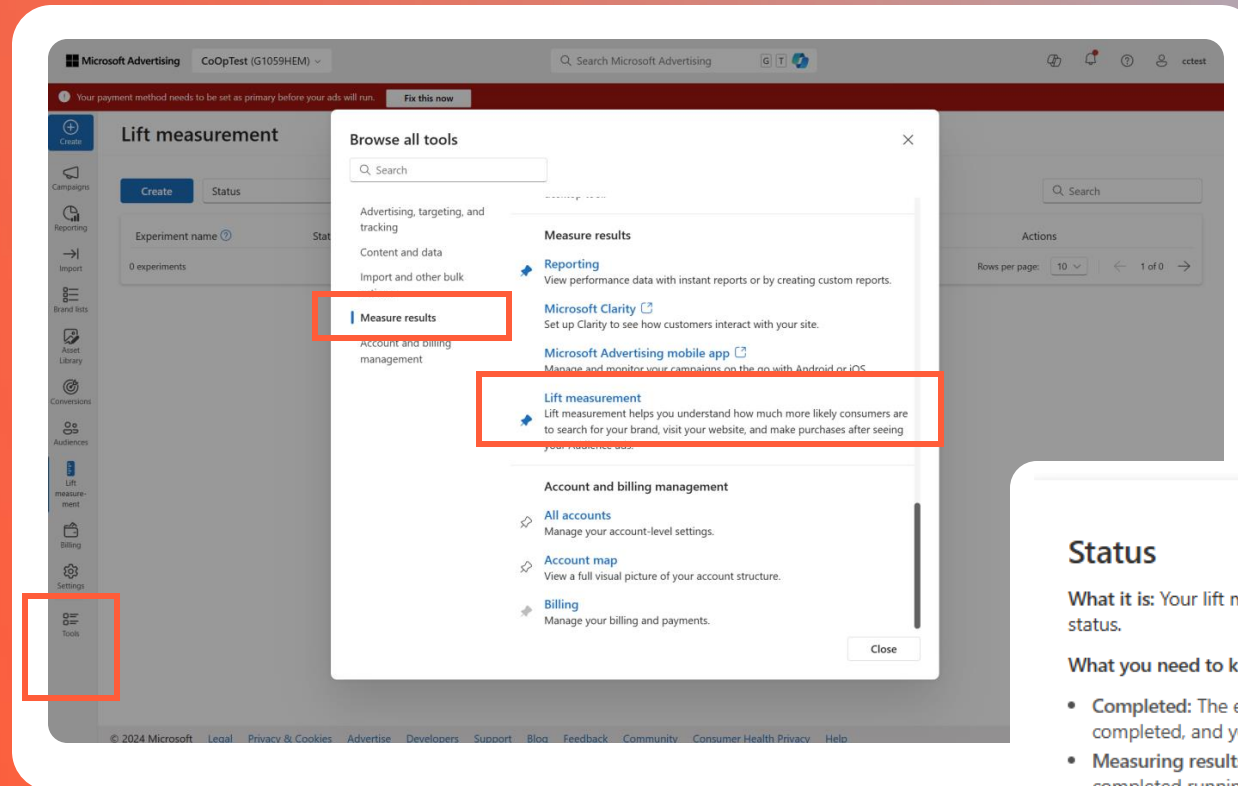

At the bottom of the form are three buttons: Back, Save and exit (highlighted in blue), and Cancel.

05 Access your results

An email notification will be sent once the study has completed.

From the navigation menu on the left, select **Tools** > **Measure results** > **Lift measurement**.

- When the experiment is completed, select the link in the **Experiment name** column to access the report.

Status

What it is: Your lift measurement experiment's status.

What you need to know: There are five statuses:

- **Completed:** The experiment successfully completed, and you can now view the results.
- **Measuring results:** Your experiment has completed running and we're measuring the results.
- **Active:** The experiment is running as expected. Once it's complete you can view the results.
Note: You can't edit active experiments.
- **Scheduled:** The experiment isn't active yet because it's scheduled to start at a later date.
Note: You can still edit this experiment before it runs.
- **Experiment failed:** Your campaign(s) didn't meet the eligibility requirements to run the experiment. Please review the eligibility requirements that appear in the Summary pane during experiment creation.

06

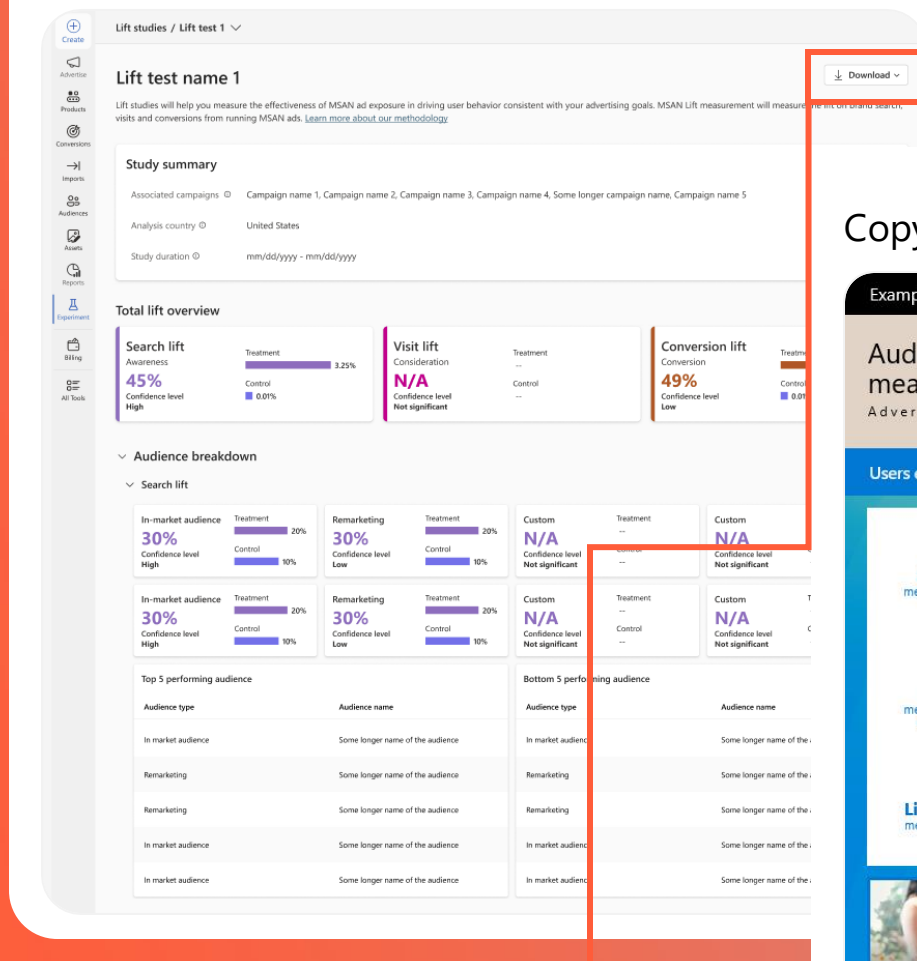

How to share results with clients

Leverage the snapshot directly from the platform or copy results into the onepager template.

- To access lift results for top performing audiences, **download** the data into a CSV file and access on the **Top5Results** tab.

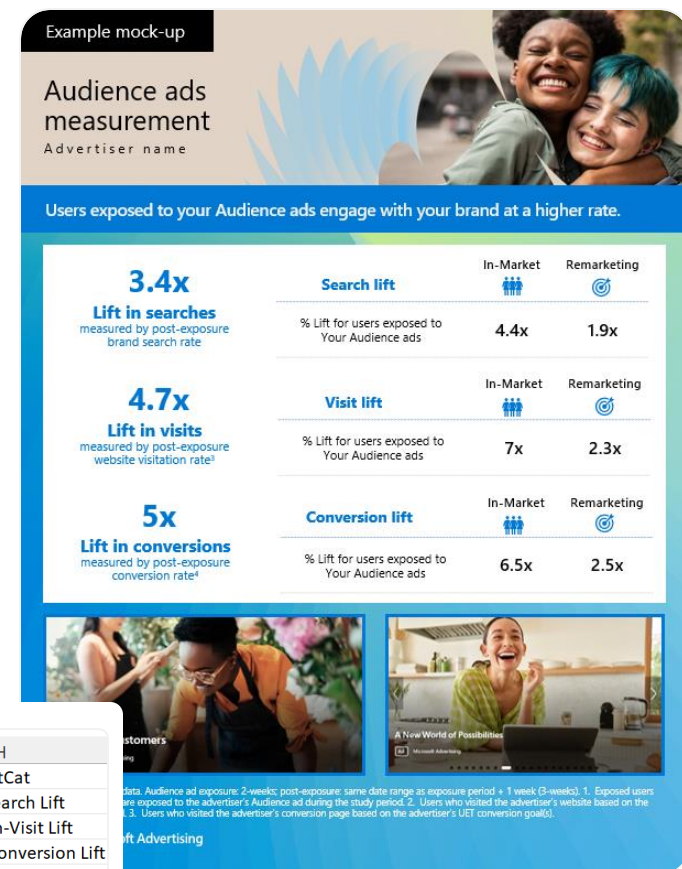

Option 1:

Leverage snapshot directly from the platform

Option 2:

Copy results into the onepager template
