"MCP agents securely connect to the systems we rely on every day, unlocking entirely new ways of working. Using M365 Copilot, Microsoft Advertising MCP, and Azure AI Foundry, we've **reduced campaign audit timelines from hours to minutes** while building a scalable foundation for AI-driven transformation across media and marketing."

— Dan Roberts, Global SVP Search,
Stagwell Media Platform

MCP: The Faster Gateway for AI-Driven Marketing Operations

What's Possible Now vs. Future?

Unlock the next-gen conversational workflows, moving from UI-driven to AI-driven experience, right at your favorite AI assistants.

Conversational Campaign Insight

Access Microsoft Advertising campaign and quickly obtain key campaign insights through conversations.

Unified Multi-platform Performance Management

Seamlessly pull campaign insights from multiple MCP-enabled platforms, such as Google Ads and Amazon Ads, to unlock a unified campaign experience.

Forward-looking use case

Internal-to-external Marketing Operations*

Easily connect internal marketing resources, such as marketing strategy docs or content plans, to external marketing platforms across ads, SEO, email, and more.

Forward-looking use case

Conversational Campaign Creation & Optimization*

Your favorite AI agent can guide you to make changes to your Microsoft Advertising campaigns, optimizing performance for you.

* These are forward-looking use cases, since the open beta will enable the read-only capabilities without the options to apply actions or changes to the Microsoft Advertising entities.

MCP vs. API

MCP (Model Context Protocol) is an industry-standard open protocol that lets large language models (LLMs) talk to external applications through one unified integration instead of building time-consuming custom integrations for every workflow.

Before MCP

After MCP

The future of AI system: MCP as Infrastructure

Be chosen

- AEO/GEO
- Grounding

Make brands and publishers visible, trusted, and citable inside AI answers

Participate

- Brand Agents
- Agentic Commerce

Let brands participate directly in AI-led decisions, not just drive traffic

Convert

- Copilot Checkout
- Advertising designed to the AI web

Turn high-intent moments into outcomes, without breaking trust

Operational and Inclusive AI Underpinnings

MCP APIs

Inclusive AI

Use cases at a glance

Ask in plain language across your Microsoft Advertising account — from account summaries to cross-platform comparison with Google.

Account performance summaries

Roll up KPIs across all campaigns for any period, with period-over-period deltas and top movers.

"Summarise the account for the last 7 days."

Campaign & keyword deep dives

Drill into any campaign, ad group, ad, or keyword to see what's driving or dragging results.

"Break down 'Brand Search' and show which ad groups drag it down."

Audience insights

See which audiences and locations convert best, and where you're over- or under-invested.

"Break down performance by audience for the last 30 days."

Leadership-ready outputs

Export Excel tables, Power BI datasets, slide-ready bullets, or an executive narrative.

"Turn this month's summary into a Power BI-ready table."

Anomaly & threshold alerts

Spot spend spikes, conversion drops, and CTR collapses.

"Flag campaigns with conversions down 30% this week."

Cross-platform comparison

Compare structure, settings, and performance side by side across Google and Microsoft.

"Compare ROAS for 'Brand Search' on Google vs. Microsoft."

Get started in four steps

No prior MCP or developer experience required — connect your favourite AI assistant in minutes.

Ready to connect? The full guide walks through your specific client, step by step.
