Online conversions update—retract and restate

Sign up for the pilot today to adjust your online conversions after a conversion is recorded. Either **update (restate)** the revenue value associated or **delete (retract)** the conversion. This is useful in scenarios like returned or canceled orders, partial returns or reduced conversion value, or correcting a data error.

- 01 Restate allows you to change the conversion value, but not the conversion count.
- 02 Retract allows you to change the conversion value to 0.00 and remove it from the conversion count and subtracts the value from the total revenue.
- 03 Restate and retract is also available for offline conversions.
- 04 Can be used only when transaction_id is included for conversions.

Offline conversions

Uploads Schedules

Upload conversions

- Upload new conversions
Download the [Excel \(.xlsx\) template](#) or the [.csv template](#).
- Update existing offline conversions (using Microsoft Click ID)
Update the values of previously uploaded conversions or remove them entirely. Download the [Excel \(.xlsx\) template](#) or the [.csv template](#).
- Update existing online conversions (using transaction ID)
Update the values of previously sent conversions or remove them entirely. Download the [Excel \(.xlsx\) template](#) or the [.csv template](#).

Browse...

Note: After creating a new offline conversion goal, please wait 2 hours before uploading conversions for this goal.

Upload and preview

Adjust offline conversions after they are recorded to account for returns, cancels, or changes.

More flexible

You can now adjust conversion values or counts after the fact, to response to customer purchase shifts or accidental data errors.

More accurate

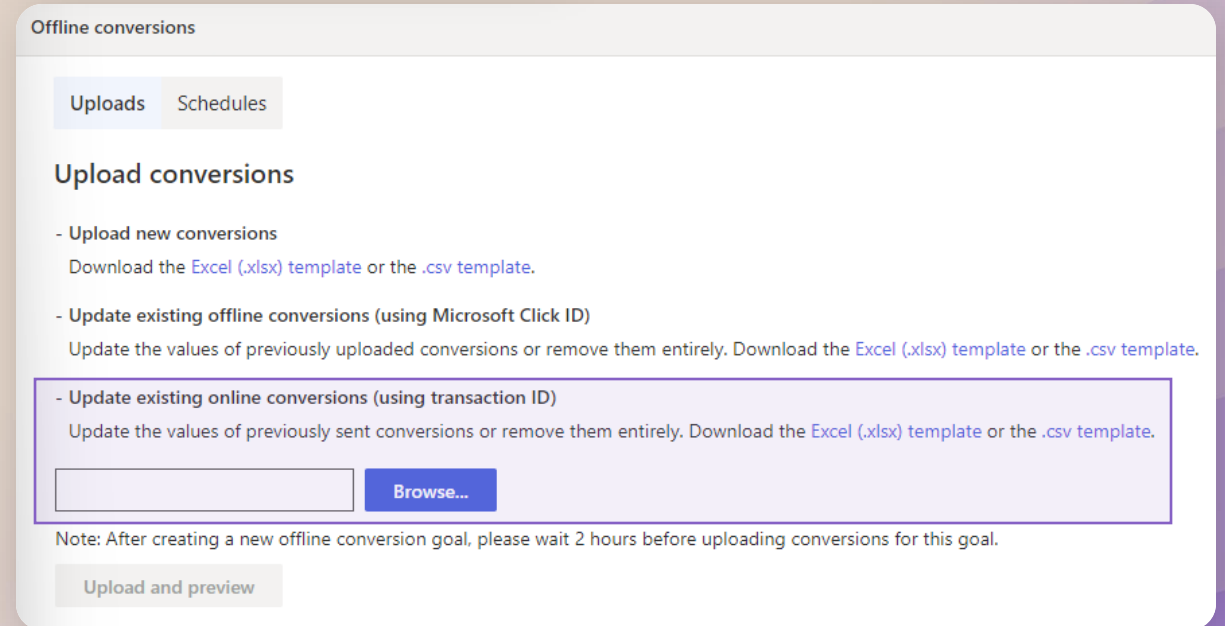

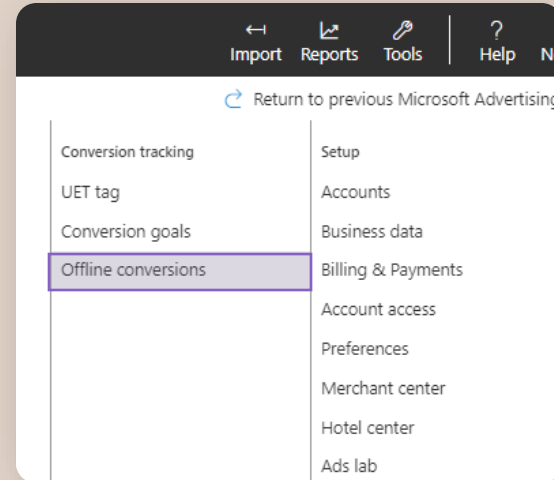

These new adjustment options can help your reporting views be more accurate and actionable. As they will better represent your conversion metrics.

Getting started

Overview

- In the online experience of Microsoft Advertising, select **Tools** and under Conversion tracking select **Offline conversions**.
- You will need to include the transaction id as a parameter via the associated UET tag.
- Download the Excel or CSV template to update (restate) or delete (retract) existing online conversions.

Upload template

Template for updating and deleting offline conversions requires the following parameters

- 1 Transaction ID (the transaction_id that was sent in a Universal Event Tracking (UET) custom event which led to that conversion) —**mandatory to use this feature.**
- 2 Conversion name
- 3 Adjustment time
- 4 Adjustment type (must be either RESTATE or RETRACT)
- 5 Adjustment value
- 6 Adjustment value currency

Fill in the required parameters, save the file, and upload it to the field highlighted in the previous slide.

1	### INSTRUCTIONS ###								
2	# Important: Remember to change the TimeZone value (GMT offset) in the "parameters" row								
3	# TimeZone values should be entered in HHMM format (e.g. New York is -0500 and Berlin is +0100. If you use Greenwich Mean Time, simply enter +0000).								
4	# Make sure you do not include additional columns. For more instructions on how to use this template, visit https://aka.ms/uptodatestoconversions

Important things to know

Important things to know

01

This feature can only be used for conversions that have [transaction_id](#) present within the Universal Event Tracking (UET) as a custom event.

02

The update (restate) and delete (retract) adjustments will not reflect in hotel reports for Hotel Ads.

Thank you
